# Overview

VIVOTEK FD8131 is an easy-to-use fixed dome network camera specifically designed for indoor security applications with a compact, stylish housing. Equipped with a 1MP sensor enabling viewing resolution of 1280x800 at 30 fps, users need look no further for an all-in-one camera capable of capturing high quality HD video.

This camera supports the industry-standard H.264 compression technology, drastically reducing file sizes and conserving valuable network bandwidth. With MPEG-4 and MJPEG compatibility also included, video streams can also be transmitted in any of these formats for versatile applications. The streams can also be individually configured to meet different constraints, thereby further reducing bandwidth and storage requirements. Users can thus receive multiple streams simultaneously in different resolutions, frame rates, and image qualities for viewing on different platforms.

With the vari-focal lens, the FD8131 provides users the freedom to adjust the field of view in accordance with their application. Also included are a number of advanced features which are standard for VIVOTEK cameras, including tamper detection, MicroSD/SDHC card slot, 802.3af compliant PoE, and VIVOTEK's 32-channel recording software. With all of these capabilities, the FD8131 provides the best value in IP surveillance for indoor applications such as offices, banks, and retail stores.

## Revision History

- Rev. 1.0: Initial release

## Read Before Use

The use of surveillance devices may be prohibited by law in your country. The Network Camera is not only a high-performance web-ready camera but can also be part of a flexible surveillance system. It is the user's responsibility to ensure that the operation of such devices is legal before installing this unit for its intended use.

It is important to first verify that all contents received are complete according to the Package Contents listed below. Take note of the warnings in the Quick Installation Guide before the Network Camera is installed; then carefully read and follow the instructions in the Installation chapter to avoid damage due to faulty assembly and installation. This also ensures the product is used properly as intended.

The Network Camera is a network device and its use should be straightforward for those who have basic networking knowledge. It is designed for various applications including video sharing, general security/surveillance, etc. The Configuration chapter suggests ways to best utilize the Network Camera and ensure proper operations. For creative and professional developers, the URL Commands of the Network Camera section serves as a helpful reference to customizing existing homepages or integrating with the current web server.

## Package Contents

- FD8131
- Alignment sticker
- RJ45 Female/Female Coupler / Screws / Clamp Core
- Software CD
- Warranty Card
- Quick Installation Guide

Because this model supports PoE, DC adapter is optional and is user-supplied.

## Symbols and Statements in this Document

**INFORMATION:** provides important messages or advices that might help prevent inconvenient or problem situations.

**NOTE:** Notices provide guidance or advices that are related to the functional integrity of the machine.

**Tips:** Tips are useful information that helps enhance or facilitate an installation, function, or process.

**WARNING! or IMPORTANT:** These statements indicate situations that can be dangerous or hazardous to the machine or you.

**Electrical Hazard:** This statement appears when high voltage electrical hazards might occur to an operator.

## Physical Description

### General I/O Terminal Block

This Network Camera provides a general I/O terminal block which is used to connect external input / output devices. The pin definitions are described below. The 24V AC can be used as an alternate power source.

Pin	Name
+	Digital Input +
-	Digital Input -

### Hardware Reset

The reset button is used to reset the system or restore the factory default settings. Sometimes resetting the system can return the camera to normal operation. If the system problems remain after reset, restore the factory settings and install again.

**Reset:** Press and release the recessed reset button with a straightened paper clip. Wait for the Network Camera to reboot.

**Restore:** Press and hold the recessed reset button until the status LED rapidly blinks. Note that all settings will be restored to factory default. Upon successful restore, the status LED will blink green and red during normal operation.

### Micro SD/SDHC Card Capacity

This network camera is compliant with **Micro SD/SDHC 16GB / 8GB** and other preceding standard SD cards.

## Installation

### Removing Dome Cover

First, follow the instructions below to remove the dome cover. Flip the black retention tabs in the counter-clockwise direction to release the dome cover (clockwise if you look from the bottom up.)

Record the MAC address before installing the camera.

Then remove the black cover as shown below.

To install the camera to a ceiling or wall:

1. Attach the alignment sticker to the ceiling/wall.
2. Through the two circles on the sticker, drill two pilot holes into the ceiling/wall.
3. The Network Camera can be mounted with the cable routed through the ceiling/wall or from the side. If you want to feed the cable through the ceiling/wall, drill a cable hole A as shown in the above picture.
4. Hammer the supplied plastic anchors into the holes.
5. Align the two holes on each side of the camera base with the two plastic anchors on the ceiling/wall, insert the supplied screws to corresponding holes and secure them with a screwdriver.

6. Buckle the supplied clamp core onto the cable to prevent the EMI radiation.

## Network Deployment

### General Connection (without PoE)

This section explains how to configure the Network Camera to an Internet connection.

1. If you have external devices such as sensors and alarms, make the connection from the general I/O terminal block.

+ : Digital input
- : Digital input

2. Use the supplied RJ45 female/female coupler to connect the Network Camera to a switch.
3. Connect the power cable from the Network Camera to a power outlet. The DC adapter is user-supplied.

## Set up the Network Camera through Power over Ethernet (PoE)

### When using a PoE-enabled switch

The Network Camera is PoE-compliant, allowing transmission of power and data via a single Ethernet cable. Follow the below illustration to connect the Network Camera to a PoE-enabled switch via Ethernet cable.

### When using a non-PoE switch

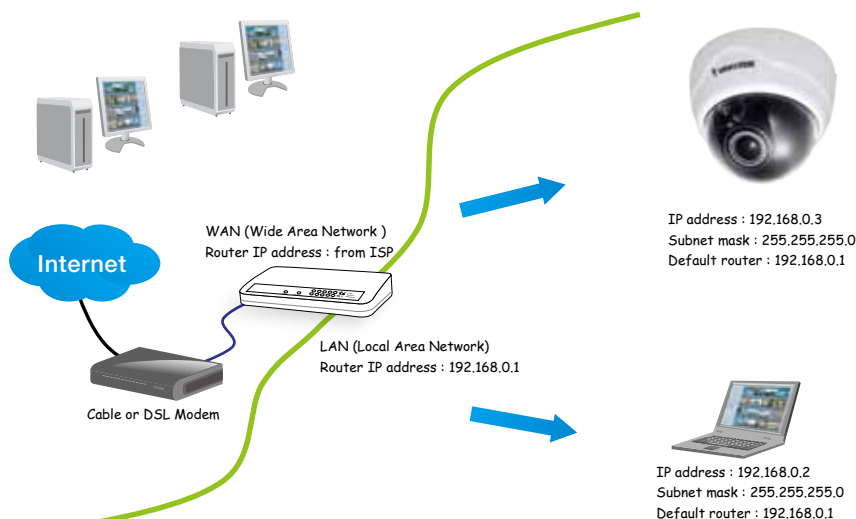

If your switch/router does not support PoE, use a PoE power injector (optional) to connect between the Network Camera and a non-PoE switch.

## Internet connection via a router

Before setting up the Network Camera over the Internet, make sure you have a router and follow the steps below.

1. Connect your Network Camera behind a router, the Internet environment is illustrated below. Regarding how to obtain your IP address, please refer to Software Installation on page 12 for details.

2. In this case, if the Local Area Network (LAN) IP address of your Network Camera is 192.168.0.3, please forward the following ports for the Network Camera on the router.

- HTTP port: default is 80
- RTSP port: default is 554
- RTP port for audio: default is 5558
- RTCP port for audio: default is 5559
- RTP port for video: default is 5556
- RTCP port for video: default is 5557

If you have changed the port numbers on the Network page, please open the ports accordingly on your router. For information on how to forward ports on the router, please refer to your router's user's manual.

3. Find out the public IP address of your router provided by your ISP (Internet Service Provider). Use the public IP and the secondary HTTP port to access the Network Camera from the Internet. Please refer to Network Type on page 52 for details.

## Internet connection with static IP

Choose this connection type if you are required to use a static IP for the Network Camera. Please refer to LAN setting on page 51 for details.

## Internet connection via PPPoE (Point-to-Point over Ethernet)

Choose this connection type if you are connected to the Internet via a DSL Line. Please refer to PPPoE on page 52 for details.

## Software Installation

Installation Wizard 2 (IW2), free-bundled software included on the product CD, helps you set up your Network Camera on the LAN.

1. Install IW2 under the Software Utility directory from the software CD.  
Double-click the IW2 shortcut on your desktop to launch the program.
2. The program will conduct an analysis of your network environment.  
After your network environment is analyzed, please click **Next** to continue the program.

3. The program will search for all VIVOTEK network devices on the same LAN.
4. After a brief search, the installer window will prompt. Click on the MAC and model name that matches the one printed on the product label. You can then double-click on the address to open a management session with the Network Camera.

## Ready to Use

1. A browser session with the Network Camera should prompt as shown below.
2. You should be able to see live video from your camera. You may also install the 32-channel recording software from the software CD in a deployment consisting of multiple cameras. For its installation details, please refer to its related documents.

To adjust the viewing angle -- 3-axis mechanism design

1. Loosen the tilt adjustment screws and then turn the lens module up or down, or swing left or right. Upon completion, tighten the screw.
2. Turn the lens to adjust the image orientation.

**Pan 350°**

**Tilt 70°**

**Rotate 340°**

### 3-axis Mechanism Design

The sophisticated 3-axis mechanism design offers very flexible, easy hardware installation for either ceiling or wall mount.

### **To adjust the zoom factor and focus range**

1. Loosen the zoom controller and then adjust zoom factor by moving the controller left and right. Upon completion, tighten the zoom controller screw.
2. Loosen the focus controller and then adjust focus range by moving the controller left and right. Upon completion, tighten the focus controller screw.

## Completion

1. Align the inner side of the black cover with the notches on both sides of the lens, fix the black cover.
2. If you choose to feed the cable through the ceiling/wall, arrange the cable neatly through the cable hole. If you choose to feed the cable from the side, remove plate B.
3. Attach the dome cover to the camera as shown below. The dome cover cannot be attached if installed in the wrong orientation. Align the side cover (or side cutout) with where the cable comes out from the camera. Push the dome cover to join with the camera.
4. Finally, make sure all parts of the camera are securely installed.

# Accessing the Network Camera

This chapter explains how to access the Network Camera through web browsers, RTSP players, 3GPP-compatible mobile devices, and VIVOTEK recording software.

## Using Web Browsers

Use Installation Wizard 2 (IW2) to access the Network Cameras on LAN.

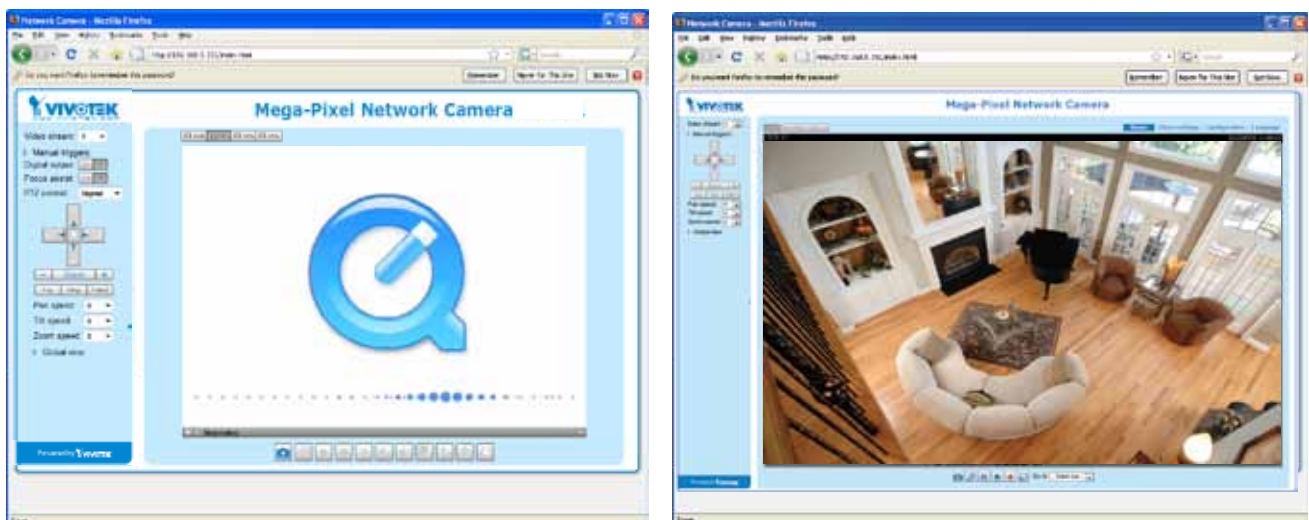

If your network environment is not a LAN, follow these steps to access the Network Camera:

1. Launch your web browser (e.g., Microsoft® Internet Explorer or Mozilla Firefox).
2. Enter the IP address of the Network Camera in the address field. Press **Enter**.
3. The live video will be displayed in your web browser.
4. If it is the first time installing the VIVOTEK network camera, an information bar will prompt as shown below. Follow the instructions to install the required plug-in on your computer.

### NOTE:

- For Mozilla Firefox or Netscape users, your browser will use Quick Time to stream the live video. If you don't have Quick Time on your computer, please download it first, then launch the web browser.

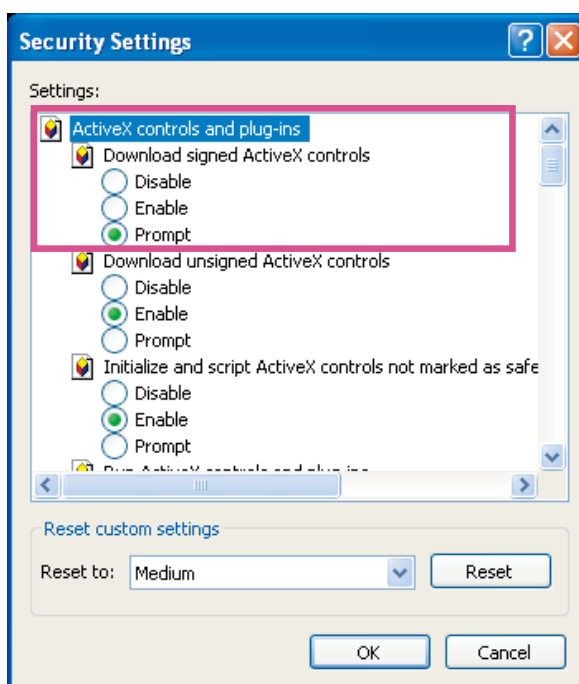

- By default, the Network Camera is not password-protected. To prevent unauthorized access, it is highly recommended to set a password for the Network Camera. For more information about how to enable password protection, please refer to Security on page 67.
- If you see a dialog box indicating that your security settings prohibit running ActiveX® Controls, please enable the ActiveX® Controls for your browser.

1. Choose Tools > Internet Options > Security > Custom Level.

2. Look for Download signed ActiveX® controls; select Enable or Prompt. Click **OK**.

3. Refresh your web browser, then install the ActiveX® control. Follow the instructions to complete installation.

**IMPORTANT!**

- Currently the Network Camera utilizes 32-bit ActiveX plugin. You CAN NOT open a management/view session with the camera using a 64-bit IE browser.
  - If you encounter this problem, try execute the Iexplore.exe program from C:\Windows\SysWOW64. A 32-bit version of IE browser will be installed.
  - On Windows 7, the 32-bit explorer browser can be accessed from here:  
[C:\Program Files \(x86\)\Internet Explorer\Iexplore.exe](C:\Program Files (x86)\Internet Explorer\Iexplore.exe)
-

## Using RTSP Players

To view the MPEG-4 streaming media using RTSP players, you can use one of the following players that support RTSP streaming.

Quick Time Player

VLC media player

1. Launch the RTSP player.
2. Choose File > Open URL. A URL dialog box will pop up.
3. The address format is `rtsp://<ip address>:<rtsp port>/<RTSP streaming access name for stream1 or stream2>`

As most ISPs and players only allow RTSP streaming through port number 554, please set the RTSP port to 554. For more information, please refer to RTSP Streaming on page 59.

For example:

4. The live video will be displayed in your player.  
For more information on how to configure the RTSP access name, please refer to RTSP Streaming on page 59 for details.

## Using 3GPP-compatible Mobile Devices

To view the streaming media through 3GPP-compatible mobile devices, make sure the Network Camera can be accessed over the Internet. For more information on how to set up the Network Camera over the Internet, please refer to Setup the Network Camera over the Internet on page 9.

To utilize this feature, please check the following settings on your Network Camera:

1. Because most players on 3GPP mobile phones do not support RTSP authentication, make sure the authentication mode of RTSP streaming is set to disable.  
For more information, please refer to RTSP Streaming on page 59.
2. As the the bandwidth on 3G networks is limited, you will not be able to use a large video size. Please set the video streaming parameters as listed below.  
For more information, please refer to Stream settings on page 47.

Video Mode	MPEG-4
Frame size	176 x 144
Maximum frame rate	5 fps
Intra frame period	1S
Video quality (Constant bit rate)	40kbps

3. As most ISPs and players only allow RTSP streaming through port number 554, please set the RTSP port to 554. For more information, please refer to RTSP Streaming on page 59.
4. Launch the player on the 3GPP-compatible mobile devices (e.g., Quick Time).
5. Type the following URL commands into the player.  
The address format is `rtsp://<public ip address of your camera>:<rtsp port>/<RTSP streaming access name for stream # with small frame size and frame rate>`.  
For example:

You can configure Stream #2 into the suggested stream settings as listed above for live viewing on a mobile device.

## Using VIVOTEK Recording Software

The product software CD also contains an ST7501 recording software, allowing simultaneous monitoring and video recording for multiple Network Cameras. Please install the recording software; then launch the program to add the Network Camera to the Channel list. For detailed information about how to use the recording software, please refer to the user's manual of the software or download it from <http://www.vivotek.com>.

# Main Page

This chapter explains the layout of the main page. It is composed of the following sections: VIVOTEK INC. Logo, Host Name, Camera Control Area, Configuration Area, Menu, and Live Video Window.

## VIVOTEK INC. Logo

Click this logo to visit the VIVOTEK website.

## Host Name

The host name can be customized to fit your needs. For more information, please refer to System on page 30.

## Camera Control Area

**Video Stream:** This Network Camera supports multiple streams (stream 1 ~ 4) simultaneously. You can select one of them for live viewing. For more information about multiple streams, please refer to page 47 for detailed information.

**Manual Trigger:** Click to enable/disable an event trigger manually. Please configure an event setting on Application page before you enable this function. A total of 3 event settings can be configured. For more information about event setting, please refer to page 81. If you want to hide this item on the homepage, please go to **Configuration > System > Homepage Layout > General settings > Customized button** to deselect "show manual trigger button".

## Configuration Area

**Client Settings:** Click this button to access the client setting page. For more information, please refer to Client Settings on page 27.

**Configuration:** Click this button to access the configuration page of the Network Camera. It is suggested that a password be applied to the Network Camera so that only the administrator can configure the Network Camera. For more information, please refer to Configuration on page 29.

**Language:** Click this button to choose a language for the user interface. Language options are available in: English, Deutsch, Español, Français, Italiano, 日本語, Português, 簡體中文, and 繁體中文. Please note that you can also change a language on the Configuration page; please refer to page 29.

## Hide Button

You can click the hide button to hide the control panel or display the control panel.

## Resize Buttons

Click the Auto button, the video cell will resize automatically to fit the monitor/browser window.

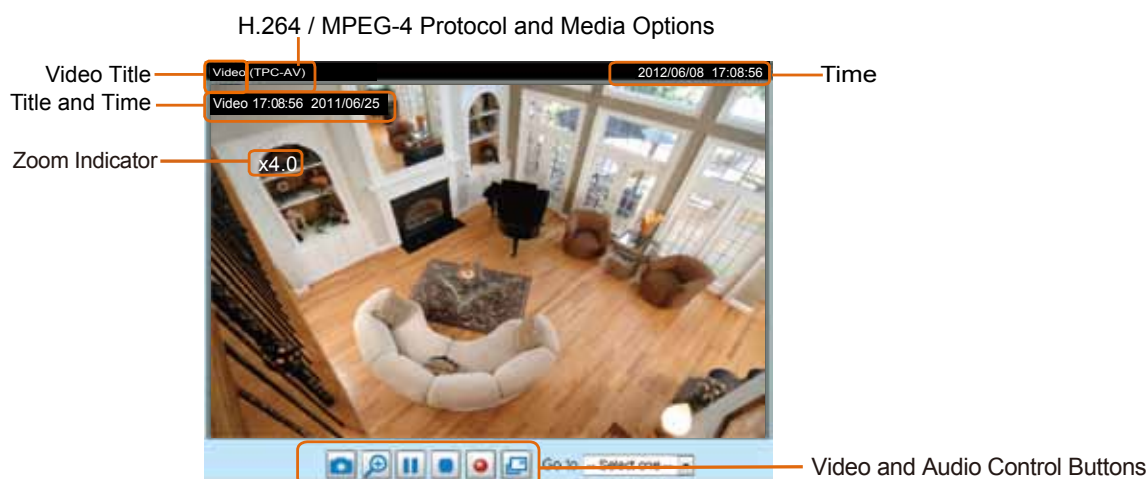

Click 100% is to display the original homepage size.

Click 50% is to resize the homepage to 50% of its original size.

Click 25% is to resize the homepage to 25% of its original size.

## Live Video Window

- The following window is displayed when the video mode is set to H.264 / MPEG-4:

**Video Title:** The video title can be configured. For more information, please refer to Video Settings on page 41.

**H.264 / MPEG-4 Protocol and Media Options:** The transmission protocol and media options for H.264 / MPEG-4 video streaming. For further configuration, please refer to Client Settings on page 27.

**Time:** Display the current time. For further configuration, please refer to Media > Image > Genral settings on page 41.

**Title and Time:** The video title and time can be stamped on the streaming video. For further configuration, please refer to Media > Image > General settings on page 42.

**PTZ Panel:** This Network Camera supports “digital” (e-PTZ) pan/tilt/zoom control, which allows roaming a smaller view frame within a large view frame. Please refer to PTZ settings on page 78 for detailed information.

**Global View:** Click on this item to display the Global View window. The Global View window contains a full view image (the largest frame size of the captured video) and a floating frame (the viewing region of the current video stream). The floating frame allows users to control the e-PTZ function (Electronic Pan/Tilt/Zoom). For more information about e-PTZ operation, please refer to E-PTZ Operation on page 78. For more information about how to set up the viewing region of the current video stream, please refer to page 78.

**NOTE:**

For a megapixel camera, it is recommended to use monitors of the 24" size or larger, and are capable of 1600x1200 or better resolutions.

**Video Control Buttons:** Depending on the Network Camera model and Network Camera configuration, some buttons may not be available.

 **Snapshot:** Click this button to capture and save still images. The captured images will be displayed in a pop-up window. Right-click the image and choose **Save Picture As** to save it in JPEG (\*.jpg) or BMP (\*.bmp) format.

 **Digital Zoom:** Click and uncheck “Disable digital zoom” to enable the zoom operation. The navigation screen indicates the part of the image being magnified. To control the zoom level, drag the slider bar. To move to a different area you want to magnify, drag the navigation screen.

 **Pause:** Pause the transmission of the streaming media. The button becomes the  **Resume** button after clicking the Pause button.

 **Stop:** Stop the transmission of the streaming media. Click the  **Resume** button to continue transmission.

 **Start MP4 Recording:** Click this button to record video clips in MP4 file format to your computer. Press the  **Stop MP4 Recording** button to end recording. When you exit the web browser, video recording stops accordingly. To specify the storage destination and file name, please refer to MP4 Saving Options on page 28 for details.

 **Full Screen:** Click this button to switch to full screen mode. Press the “Esc” key to switch back to normal mode.

■ The following window is displayed when the video mode is set to MJPEG:

**Video Title:** The video title can be configured. For more information, please refer to Media > Image on page 42.

**Time:** Display the current time. For more information, please refer to Media > Image on page 42.

**Title and Time:** Video title and time can be stamped on the streaming video. For more information, please refer to Media > Image on page 42.

**Video Control Buttons:** Depending on the Network Camera model and Network Camera configuration,

some buttons may not be available.

**Snapshot:** Click this button to capture and save still images. The captured images will be displayed in a pop-up window. Right-click the image and choose **Save Picture As** to save it in JPEG (\*.jpg) or BMP (\*.bmp) format.

**Digital Zoom:** Click and uncheck “Disable digital zoom” to enable the zoom operation. The navigation screen indicates the part of the image being magnified. To control the zoom level, drag the slider bar. To move to a different area you want to magnify, drag the navigation screen.

**Start MP4 Recording:** Click this button to record video clips in MP4 file format to your computer. Press the  **Stop MP4 Recording** button to end recording. When you exit the web browser, video recording stops accordingly. To specify the storage destination and file name, please refer to MP4 Saving Options on page 28 for details.

**Full Screen:** Click this button to switch to full screen mode. Press the “Esc” key to switch back to normal mode.

# Client Settings

This chapter explains how to select the stream transmission mode and saving options on the local computer. When completed with the settings on this page, click **Save** on the page bottom to enable the settings.

## H.264 / MPEG-4 Media Options

H.264/MPEG-4 Media Options

☒ Video and Audio

☐ Video Only

☐ Audio Only

Select to stream video or audio data or both. This is enabled only when the video mode is set to H.264 or MPEG-4.

## H.264 / MPEG-4 Protocol Options

H.264/MPEG-4 Protocol Options

☐ UDP Unicast

☐ UDP Multicast

☒ TCP

☐ HTTP

Depending on your network environment, there are four transmission modes of H.264 or MPEG-4 streaming:

**UDP unicast:** This protocol allows for more real-time audio and video streams. However, network packets may be lost due to network burst traffic and images may be broken. Activate UDP connection when occasions require time-sensitive responses and the video quality is less important. Note that each unicast client connecting to the server takes up additional bandwidth and the Network Camera allows up to ten simultaneous accesses.

**UDP multicast:** This protocol allows multicast-enabled routers to forward network packets to all clients requesting streaming media. This helps to reduce the network transmission load of the Network Camera while serving multiple clients at the same time. Note that to utilize this feature, the Network Camera must be configured to enable multicast streaming at the same time. For more information, please refer to RTSP Streaming on page 59.

**TCP:** This protocol guarantees the complete delivery of streaming data and thus provides better video quality. The downside of this protocol is that its real-time effect is not as good as that of the UDP protocol.

**HTTP:** This protocol allows the same quality as TCP protocol without needing to open specific ports for streaming under some network environments. Users inside a firewall can utilize this protocol to allow streaming data through.

## MP4 Saving Options

**MP4 saving options**

Folder:

File name prefix:

☒ Add date and time suffix to file name

Users can record live video as they are watching it by clicking  Start MP4 Recording on the main page. Here, you can specify the storage destination and file name.

**Folder:** Specify a storage destination for the recorded video files. The location can be changed.

**File name prefix:** Enter the text that will be appended to the front of the video file name. A specified folder will be automatically created on your local hard disk.

**Add date and time suffix to the file name:** Select this option to append the date and time to the end of the file name.

## Local Streaming Buffer Time

**Local streaming buffer time**

Millisecond

Chances are you may encounter unsteady bandwidth during operation, the live streaming may lag and not be very smoothly. If you enable this option, the live streaming will be stored on the camera's buffer for a few seconds before being played on the live viewing window. This will help you see the streaming more smoothly. If you enter 3000 Millisecond, the streaming will delay for 3 seconds.

# Configuration

Click **Configuration** on the main page to enter the camera setting pages. Note that only Administrators can access the configuration page.

VIVOTEK offers an easy-to-use user interface that helps you set up your network camera with minimal effort. To simplify the setting procedure, two types of user interfaces are available: Advanced Mode for professional users and Basic Mode for entry-level users. Some advanced functions (PTZ/ Event/ Recording/ Local storage) are not displayed in Basic Mode.

If you want to set up advanced functions, please click **[Advanced Mode]** on the bottom of the configuration list to quickly switch to Advanced Mode.

In order to simplify the user interface, the detailed information will be hidden unless you click on the function item. When you click on the first sub-item, the detailed information for the first sub-item will be displayed; when you click on the second sub-item, the detailed information for the second sub-item will be displayed and that of the first sub-item will be hidden.

The following is the interface of the Basic Mode and the Advanced Mode:

## Basic Mode

## Advanced Mode

Each function on the configuration list will be explained in the following sections. Those functions that are displayed only in Advanced Mode are marked with **Advanced Mode**. If you want to set up advanced functions, please click **[Advanced Mode]** on the bottom of the configuration list to quickly switch over.

Navigation Area provides an instant switch among **Home** page (the monitoring page for live viewing), **Client settings**, **Configuration** page, and multi-language selection.

## System > General settings

This section explains how to configure the basic settings for the Network Camera, such as the host name and system time. It is composed of the following two columns: System, and System Time. When finished with the settings on this page, click **Save** at the bottom of the page to enable the settings.

### System

**System**

Host name:

☐ Turn off the LED indicator

**Host name:** Enter a desired name for the Network Camera. The text will be displayed at the top of the main page, and also on the view cell of ST7501 and VAST management software.

**Turn off the LED indicators:** If you do not want others to notice the network camera is in operation, you can select this option to turn off the LED indicators.

## System time

System time

Time zone: GMT+08:00 Beijing, Chongqing, Hong Kong, Kuala Lumpur, Singapore, Taipei

Note: You can upload your daylight saving time rules on [Maintenance](#) page or use the camera default value.

☒ Keep current date and time  
☐ Synchronize with computer time  
☐ Manual  
☐ Automatic

Save

**Keep current date and time:** Select this option to preserve the current date and time of the Network Camera. The Network Camera's internal real-time clock maintains the date and time even when the power of the system is turned off.

**Synchronize with computer time:** Select this option to synchronize the date and time of the Network Camera with the local computer. The read-only date and time of the PC is displayed as updated.

**Manual:** The administrator can enter the date and time manually. Note that the date and time format are [yyyy/mm/dd] and [hh:mm:ss].

**Automatic:** The Network Time Protocol is a protocol which synchronizes computer clocks by periodically querying an NTP Server.

**NTP server:** Assign the IP address or domain name of the time-server. Leaving the text box blank connects the Network Camera to the default time servers.

**Update interval:** Select to update the time using the NTP server on an hourly, daily, weekly, or monthly basis.

**Time zone Advanced Mode:** Select the appropriate time zone from the list. If you want to upload Daylight Savings Time rules, please refer to **System > Maintenance > Import/ Export files** on page 38 for details.

## System > Homepage layout **Advanced Mode**

This section explains how to set up your own customized homepage layout.

### General settings

This column shows the settings of your homepage layout. You can manually select the background and font colors in Theme Options (the second tab on this page). The settings will be displayed automatically in this Preview field. The following shows the homepage using the default settings:

- **Hide Powered by VIVOTEK:** If you check this item, it will be removed from the homepage.

### Logo graph

Here you can change the logo that is placed at the top of your homepage.

**Logo graph**

A customized logo (Gif, JPG or PNG) can be uploaded for main page. It will be resized to 160x50 pixels to replace the previous logo.

☐ Default
 ☒ Custom

Logo link:

Follow the steps below to upload a new logo:

1. Click **Custom** and the Browse field will appear.
2. Select a logo from your files.
3. Click **Upload** to replace the existing logo with a new one.
4. Enter a website link if necessary.
5. Click **Save** to enable the settings.

### Customized button

If you want to hide manual trigger buttons on the homepage, please uncheck this item. This item is checked by default.

**Customized button**

☒ Show manual trigger button

## Theme Options

Here you can change the color of your homepage layout. There are three types of preset patterns for you to choose from. The new layout will simultaneously appear in the **Preview** filed. Click **Save** to enable the settings.

The screenshot displays the 'Theme options' tab in the VIVOTEK configuration interface. It includes a preview of the homepage layout with various settings and a 'Color' section for customizing colors.

**Font Color** (points to the 'Video stream' dropdown menu)

**Font Color of the Configuration Area** (points to the 'Manual triggers' link)

**Background Color of the Control Area** (points to the 'Powered by VIVOTEK' text)

**Background Color of the Configuration Area** (points to the 'Powered by VIVOTEK' text)

**Preset patterns** (points to the 'Themes' section showing three preset patterns and a 'Custom' option)

**Font Color of the Video Title** (points to the 'Mega-Pixel Network' title)

**Background Color of the Video Area** (points to the video player area)

**Frame Color** (points to the video player frame)

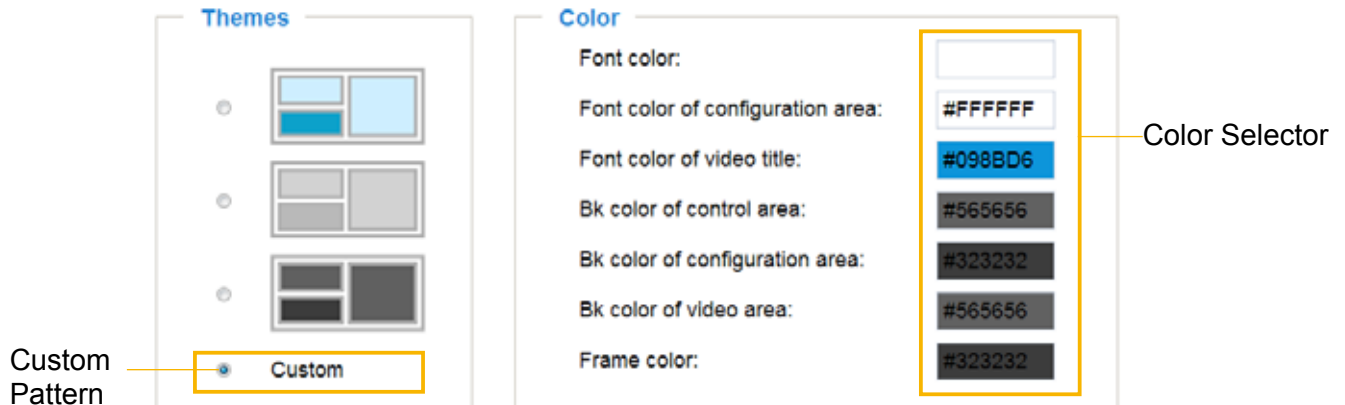

**Color** (points to the 'Color' section with the following settings):

- Font color: #000000
- Font color of configuration area: #FFFFFF
- Font color of video title: #098BD6
- Bk color of control area: #C4EAFF
- Bk color of configuration area: #0186D1
- Bk color of video area: #C4EAFF
- Frame color: #0186D1

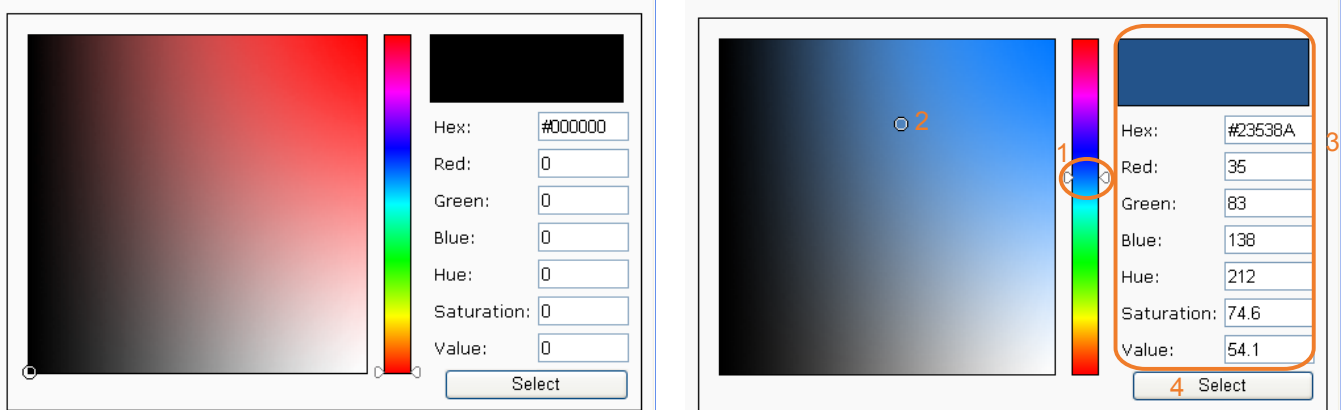

■ Follow the steps below to set up the customized homepage:

1. Click **Custom** on the left column.
2. Click the field where you want to change the color on the right column.

3. The palette window will pop up as shown below.

4. Drag the slider bar and click on the left square to select a desired color.
5. The selected color will be displayed in the corresponding fields and in the **Preview** column.
6. Click **Save** to enable the settings.

## System > Logs Advanced Mode

This section explains how to configure the Network Camera to send the system log to a remote server as backup.

### Log server settings

Log server settings

☒ Enable remote log

IP address:

port:

Save

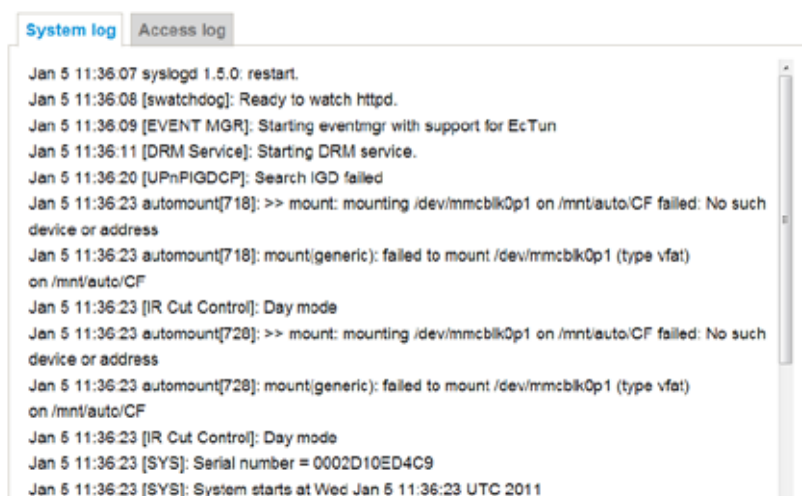

Follow the steps below to set up the remote log:

1. Select **Enable remote log**.
2. In the IP address text box, enter the IP address of the remote server.
2. In the port text box, enter the port number of the remote server.
3. When completed, click **Save** to enable the setting.

You can configure the Network Camera to send the system log file to a remote server as a log backup. Before utilizing this feature, it is suggested that the user install a log-recording tool to receive system log messages from the Network Camera. An example is Kiwi Syslog Daemon. Visit <http://www.kiwisyslog.com/kiwi-syslog-daemon-overview/>.

### System log

This column displays the system log in a chronological order. The system log is stored in the Network Camera's buffer area and will be overwritten when reaching a certain limit.

## Access log

System log

Access log

```
Jan 5 11:36:28 [RTSP SERVER]: Start one session, IP=172.16.2.52
Jan 5 11:49:15 [RTSP SERVER]: Start one session, IP=192.168.4.105
Jan 5 13:11:20 [RTSP SERVER]: Start one session, IP=192.168.4.105
```

Access log displays the access time and IP address of all viewers (including operators and administrators) in a chronological order. The access log is stored in the Network Camera's buffer area and will be overwritten when the number of entries reaches an upper threshold.

## System > Parameters Advanced Mode

The View Parameters page lists the entire system's parameters. If you need technical assistance, please provide the information listed on this page.

### Parameters

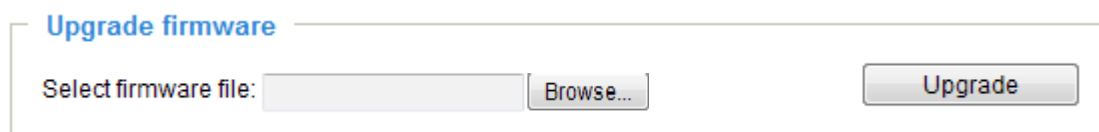

```
system_hostname='Mega-Pixel Network Camera'
system_ledoff='0'
system_lowlight='1'
system_date='2012/06/08'
system_time='14:09:29'
system_datetime=''
system_ntp=''
system_timezoneindex='320'
system_daylight_enable='0'
system_daylight_dstactualmode='1'
system_daylight_auto_begintime='NONE'
system_daylight_auto_endtime='NONE'
system_daylight_timezones=',-360,-320,-280,-240,-241,-200,-201,-160'
system_updateinterval='0'
system_info_modelname='FD8131'
system_info_extendedmodelname='FD8131'
system_info_serialnumber='000081312009'
system_info_firmwareversion='FD8131-VVTK-0100a'
system_info_language_count='9'
system_info_language_i0='English'
system_info_language_i1='Deutsch'
system_info_language_i2='Español'
```

## System > Maintenance

This chapter explains how to restore the Network Camera to factory default, upgrade firmware version, etc.

### General settings > Upgrade firmware

This feature allows you to upgrade the firmware of your Network Camera. It takes a few minutes to complete the process.

**Note: Do not power off the Network Camera during the upgrade!**

Follow the steps below to upgrade the firmware:

1. Download the latest firmware file from the VIVOTEK website. The file is in .pkg file format.
2. Click **Browse...** and specify the firmware file.
3. Click **Upgrade**. The Network Camera starts to upgrade and will reboot automatically when the upgrade completes.

If the upgrade is successful, you will see "Reboot system now!! This connection will close". After that, re-access the Network Camera.

The following message is displayed when the upgrade has succeeded.

Reboot system now!!  
This connection will close.

The following message is displayed when you have selected an incorrect firmware file.

Starting firmware upgrade...  
Do not power down the server during the upgrade.  
The server will restart automatically after the upgrade is completed.  
This will take about 1 - 5 minutes.  
Wrong PKG file format  
Unpack fail

### General settings > Reboot

This feature allows you to reboot the Network Camera, which takes about one minute to complete. When completed, the live video page will be displayed in your browser. The following message will be displayed during the reboot process.

The device is rebooting now. Your browser will reconnect to <http://192.168.5.151:80/>  
If the connection fails, please manually enter the above IP address in your browser.

If the connection fails after rebooting, manually enter the IP address of the Network Camera in the address field to resume the connection.

## General settings > Restore

Restore

Restore all settings to factory default except settings in

☐ Network
 ☐ Daylight saving time
 ☐ Custom language

Restore

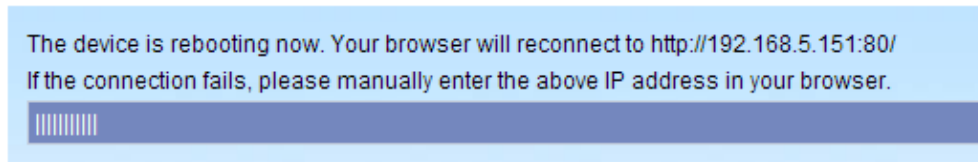

This feature allows you to restore the Network Camera to factory default settings.

Network: Select this option to retain the Network Type settings (please refer to Network Type on page 52).

Daylight Saving Time: Select this option to retain the Daylight Saving Time settings (please refer to Import/Export files below on this page).

Custom Language: Select this option to retain the Custom Language settings.

If none of the options is selected, all settings will be restored to factory default. The following message is displayed during the restoring process.

## Import/Export files Advanced Mode

This feature allows you to Export / Update daylight saving time rules, custom language file, configuration file, and server status report.

General settings

Import/Export files

Export files

Export daylight saving time configuration file

Export

Export language file

Export

Export configuration file

Export

Export server status report

Export

Upload files

Update daylight saving time rules:

Browse...

Upload

Update custom language file:

Browse...

Upload

Upload configuration file:

Browse...

Upload

Export daylight saving time configuration file: Click to set the start and end time of DST (Daylight Saving).

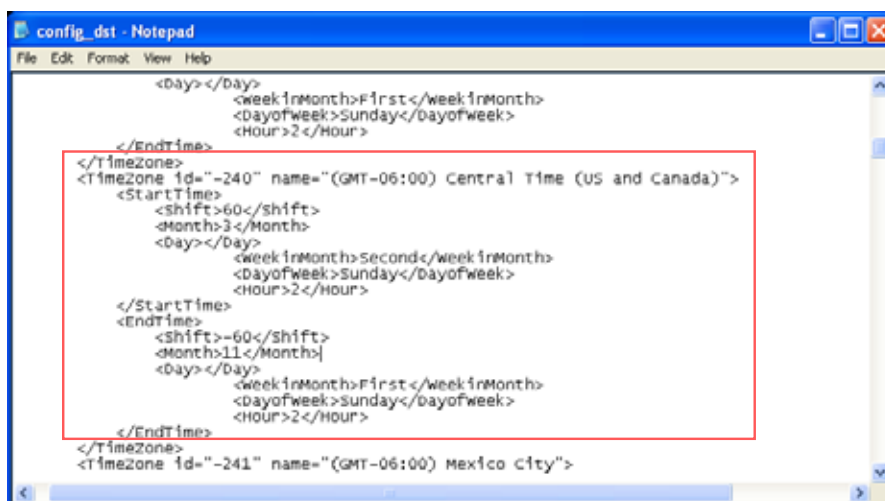

Follow the steps below to export:

1. In the Export files column, click **Export** to export the daylight saving time configuration file from the Network Camera.
2. A file download dialog will pop up as shown below. Click **Open** to review the XML file or click **Save** to store the file for editing.

3. Open the file with Microsoft® Notepad and locate your time zone; set the start and end time of DST. When completed, save the file.

In the example below, DST begins each year at 2:00 a.m. on the second Sunday in March and ends at 2:00 a.m. on the first Sunday in November.

Update daylight saving time rules: Click **Browse...** and specify the XML file to update.

If the incorrect date and time are assigned, you will see the following warning message when uploading the file to the Network Camera.

The following message is displayed when attempting to upload an incorrect file format.

Export language file: Click to export language strings. VIVOTEK provides nine languages: English, Deutsch, Español, Français, Italiano, 日本語, Português, 簡體中文, and 繁體中文.

Update custom language file: Click **Browse...** and specify your own custom language file to upload.

Export configuration file: Click to export all parameters for the device and user-defined scripts.

Update configuration file: Click **Browse...** to update a configuration file. Please note that the model and firmware version of the device should be the same as the configuration file. If you have set up a fixed IP or other special settings for your device, it is not suggested to update a configuration file.

Export server status report: Click to export the current server status report, such as time, logs, parameters, process status, memory status, file system status, network status, kernel message ... and so on.

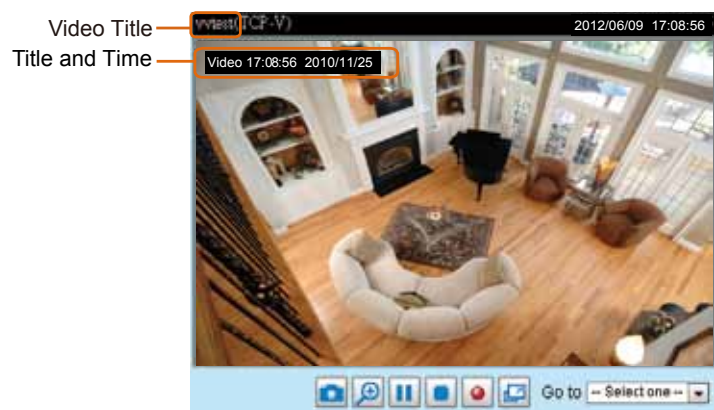

## Media > Image Advanced Mode

This section explains how to configure the image settings of the Network Camera. It is composed of the following four columns: General settings, Picture settings, Exposure, and Privacy mask.

### General settings

#### Video title

Show timestamp and video title in video and snapshots: Enter a name that will be displayed on the title bar of the live video as the picture shown below.

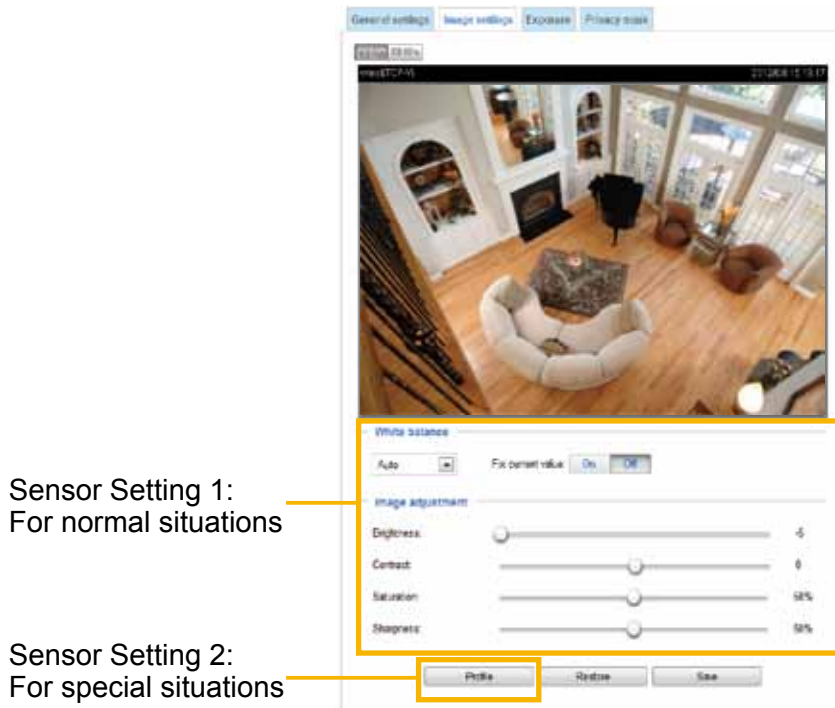

Color: Select to display color or black/white video streams.

Power line frequency: Set the power line frequency consistent with local utility settings to eliminate image flickering associated with fluorescent lights. Note that after the power line frequency is changed, you must disconnect and reconnect the power cord of the Network Camera in order for the new setting to take effect.

Video orientation: Flip - vertically reflect the display of the live video; Mirror - horizontally reflect the display of the live video. Select both options if the Network Camera is installed upside-down (e.g., on the ceiling) to correct the image orientation. Please note that if you have preset locations, those locations will be cleared after a change in flip/mirror setting.

## Image settings

On this page, you can tune the White balance and Image adjustment settings.

Sensor Setting 1:  
For normal situations

Sensor Setting 2:  
For special situations

White balance: Adjust the value for the best color temperature.

■ You may follow the steps below to adjust the white balance to the best color temperature.

1. Place a sheet of paper of white or cooler-color temperature paper, such as blue, in front of the lens, then allow the Network Camera to automatically adjust the color temperature.
2. Click the **On** button to **Fix current value** and confirm the setting while the white balance is being measured.

■ You may also manually tune the color temperature by pulling the RGain and BGain slide bars.

### Image Adjustment

■ **Brightness**: Adjust the image brightness level, which ranges from -5 to +5.

■ **Contrast**: Adjust the image contrast level, which ranges from -5 to +5.

■ **Saturation**: Adjust the image saturation level, which ranges from 0% to 100%.

■ **Sharpness**: Adjust the image sharpness level, which ranges from 0% to 100%.

Note that the **Preview** button has been cancelled, all changes made to image settings is directly shown on screen. You can click **Restore** to recall the original settings without incorporating the changes. When completed with the settings on this page, click **Save** to enable the setting. You can also click on **Profile** to adjust all settings above in a pop-up window for special lighting conditions.

## Exposure Advanced Mode

On this page, you can set the Measurement window, Exposure level, Exposure mode, and Gain control. Detailed configurations will be automatically adjusted since the sensor library will automatically adjust the value according to the ambient light.

Sensor Setting 1:  
For normal situations

— **Measurement window** —

☒ Full view ☐ BLC

— **Exposure control** —

Exposure level: -0.6

☐ Flickerless

Exposure time: 
◀
▶
 1/32000 - 1/25

Gain control: 
◀
▶
 0 - 100 %

Sensor Setting 2:  
For special situations

Profile Restore Save

**Measurement Window:** This function allows users to configure a full-view measurement window or a central background compensation window for low light compensation.

- **Full view:** Calculate the full range of view and offer appropriate light compensation.
- **BLC:** When selected, a BLC window will appear on screen meaning that the center of the scene will be taken as a weighed area. This option enables light compensation for images that are too dark or too bright to recognize; for example, for the dark side of objects that is posed against bright sunlight.

### Exposure control:

- **Exposure level:** You can manually set the Exposure level, which ranges from -2.0 to +2.0 (dark to bright).

— **Measurement window** —

☒ Full view ☐ BLC

— **Exposure control** —

Exposure level: -0.6

☒ Flickerless

Exposure time: 
◀
▶
 1/100 - 1/25

Gain control: 
◀
▶
 0 - 32 %

Profile Restore Save

**Flickerless:** Under some circumstances when there is a difference between the video capture frequency and local AC power frequency (NTSC or PAL), the mismatch causes color shifts or flickering images. If the above mismatch occurs, select the **Flickerless** checkbox, and the range of Exposure time (the shutter time) will be limited to a range in order to match the AC power frequency. See the screen capture above.

You can click and drag the pointers on the **Exposure time** and **Gain control** slide bars to specify a range of shutter time and Gain control values within which the camera can automatically tune to a better imaging result. For example, you may prefer a shorter shutter time to better capture

moving objects, while a faster shutter reduces light and needs to be compensated by electrical brightness gains.

#### To Configure a Configuration Profile:

Click on the Profile button to bring up the configuration window.

**Activated period:** Select a period of time during which this configuration will take effect. Please manually enter a range of time.

You can click **Restore** to recall the original settings without incorporating the changes. When completed with the settings on this page, click **Save** to enable the settings.

Please follow the steps below to setup a profile:

1. Check **Enable this profile**.
2. Configure a time span.
3. Configure Exposure control settings in the following columns. Please refer to previous discussions for detailed information.
4. Click **Save** to enable the setting and click **Close** to exit the page.

**Profile of exposure settings**

UCF-VI 2012/01/2 00:50:18

**Activated period**

☒ Enable and apply this profile to

Schedule mode:

From: 18:00 to: 06:00 [hh:mm]

**Measurement window**

☒ Full view ☐ BLC

**Exposure control**

Exposure level: 0

☒ Flickerless

Exposure time: 1/32000 - 1/120

Gain control: 0 - 83 %

Restore Save Close

## Privacy mask **Advanced Mode**

Click **Privacy Mask** to open the settings page. On this page, you can block out sensitive zones to address privacy concerns.

■ To set the privacy mask windows, follow the steps below:

1. Click **New** to add a new window.
2. You can use the mouse cursor to size and drag-drop the window, which is recommended to be at least twice the size of the object (height and width) you want to cover.
3. Enter a Window Name and click **Save** to enable the setting.
4. Click on the **Enable privacy mask** checkbox to enable this function.

### NOTE:

- If you want to delete the privacy mask window, please click the 'x' on the upper right corner of the window.

## Media > Video Advanced Mode

### Stream settings

This Network Camera supports multiple streams with frame size ranging from 176 x 144 to 1280 x 800 pixels.

The definition of multiple streams:

- Stream 1: Users can define the "Region of Interest" (viewing region) and the "Output Frame Size" (size of the live view window).
- Stream 2: The default frame size for Stream 2 is set to a reduced size of 640 x 400 pixels.
- Stream 3: The default frame size for Stream 3 is set to the minimized 176 x 144 for viewing on mobile devices.
- Stream 4: Stream 3 does not support the "Region of Interest" configuration.

Click **Viewing Window** to open the viewing region settings page. On this page, you can set the **Region of Interest** and the **Output Frame Size** for streams #1, #2, and #3.

Please follow the steps below to set up those settings for a stream:

1. Select a stream for which you want to set up the viewing region.
2. Select a **Region of Interest** from the drop-down list. The floating frame, the same as the one in the Global View window on the home page, will resize accordingly. If you want to set up a customized viewing region, you can also resize and drag the floating frame to a desired position with your mouse.
3. Choose a proper **Output Frame Size** from the drop-down list according to the size of your monitoring device.

**NOTE:**

- All the items in the “Region of Interest” should not be larger than the “Output Frame Size” (current maximum resolution).

- The parameters of the multiple streams:

	Region of Interest	Output frame size
Stream 1	1280 X 800 ~ 176 x 144 (Selectable)	1280 X 800 ~ 176 x 144 (Selectable)
Stream 2	1280 X 800 ~ 176 x 144 (Selectable)	1280 X 800 ~ 176 x 144 (Selectable)
Stream 3	1280 X 800 ~ 176 x 144 (Selectable)	1280 X 800 ~ 176 x 144 (Selectable)
Stream 4	fixed	fixed

When completed with the settings in the Viewing Window, click **Save** to enable the settings and click **Close** to exit the window. The selected **Output Frame Size** will immediately be applied to the **Frame size** of each video stream. Then you can go back to the home page to test the e-PTZ function. For more information about the e-PTZ function, please refer to page 78.

Click the stream item to display the detailed information. The maximum frame size will follow your settings in the above Viewing Window sections.

The screenshot displays the 'Stream settings' window with four sections for different video streams. Each section allows selection of a video codec and configuration of its parameters.

- Stream 1:** H.264 selected. Frame size: 1280x800, Max frame rate: 30 fps, Intra frame period: 1 S, Video quality: Constant bit rate (6 Mbps).
- Stream 2:** H.264 selected. Frame size: 640x400, Max frame rate: 30 fps, Intra frame period: 1 S, Video quality: Fixed quality (Good).
- Stream 3:** H.264 selected. Frame size: 176x144, Max frame rate: 5 fps, Intra frame period: 1 S, Video quality: Constant bit rate (40 Kbps).
- Stream 4:** H.264 selected. Frame size: 1280x800, Max frame rate: 30 fps, Intra frame period: 1 S, Video quality: Fixed quality (Good).

This Network Camera offers real-time H.264, MPEG-4, and MJPEG compression standards (Triple Codec) for real-time viewing. If **H.264 / MPEG-4** mode is selected, the video is streamed via the RTSP protocol. There are several parameters for you to adjust the video performance:

This close-up shows the settings for Stream 1. The 'H.264' option is highlighted with a yellow box. The parameters are: Frame size: 1280x800, Maximum frame rate: 30 fps, Intra frame period: 1 S, and Video quality: Constant bit rate (6 Mbps).

#### ■ Frame size

You can set up different video resolution for different viewing devices. For example, set a smaller frame size and lower bit rate for remote viewing on mobile phones and a larger video size and a higher bit rate for live viewing on web browsers. Note that a larger frame size takes up more bandwidth.

#### ■ Maximum frame rate

This limits the maximum refresh frame rate per second. Set the frame rate higher for smoother video quality and for recognizing moving objects in the field of view.

If the power line frequency is set to 50Hz, the frame rates are selectable at 1fps, 2fps, 3fps, 5fps, 8fps, 10fps, 15fps, 20fps, 25fps, and 30fps. If the power line frequency is set to 60Hz, the frame rates are selectable at 1fps, 2fps, 3fps, 5fps, 8fps, 10fps, 15fps, 20fps, 25fps, and 30fps. You can also select **Customize** and manually enter a value.

The frame rate will decrease if you select a higher resolution.

#### ■ Intra frame period

Determine how often to plant an I frame. The shorter the duration, the more likely you will get better video quality, but at the cost of higher network bandwidth consumption. Select the intra frame period from the following durations: 1/4 second, 1/2 second, 1 second, 2 seconds, 3 seconds, and 4 seconds.

#### ■ Video quality

Constant bit rate:

- Constant bit rate: A complex scene generally produces a larger file size, meaning that higher bandwidth will be needed for data transmission. The bandwidth utilization is configurable to match a selected level, resulting in mutable video quality performance. The bit rates are selectable at the following rates: 20Kbps, 30Kbps, 40Kbps, 50Kbps, 64Kbps, 128Kbps, 256Kbps, 512Kbps, 768Kbps, 1Mbps, 2Mbps, 3Mbps, 4Mbps, 6Mbps, and 8Mbps. You can also select **Customize** and manually enter a value.

You should specify the bit rate setting either as an Average restriction or as an Upper bound threshold. If set to the Average, video bit rate will fluctuate around the Target bit rate setting.

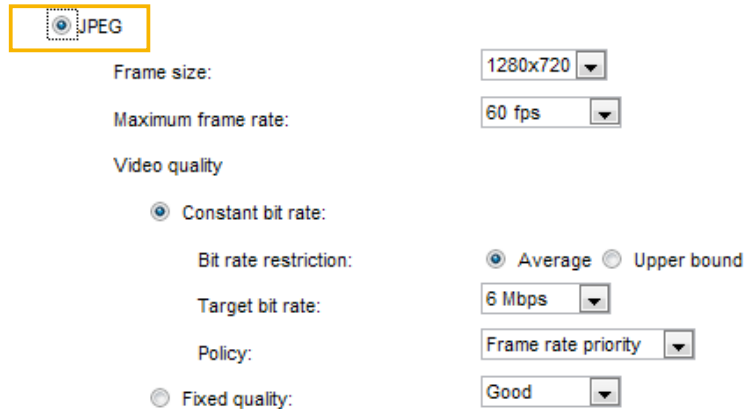

- Fixed quality: On the other hand, if **Fixed quality** is selected, all frames are transmitted with the same quality; bandwidth utilization is therefore unpredictable. The video quality can be adjusted to the following settings: Medium, Standard, Good, Detailed, and Excellent. You can also select **Customize** and manually enter a value.

#### NOTE:

- ▶ *Video quality and fixed quality refers to the compression rate, so a lower value will produce higher quality.*
- ▶ *Converting high-quality video significantly increases the CPU load, and you may encounter streaming disconnection or video loss while capturing a complicated scene. In the event of occurrence, we suggest you customize a lower video resolution or reduce the frame rate to obtain smooth video.*

If the **JPEG** mode is selected, the Network Camera sends consecutive JPEG images to the client, producing a moving effect similar to a filmstrip. Every single JPEG image transmitted guarantees the same image quality, which in turn comes at the expense of variable bandwidth usage. Because the media contents are a combination of JPEG images, no audio data is transmitted to the client. There are three parameters provided in MJPEG mode to control the video performance:

☒ JPEG

Frame size: 1280x720

Maximum frame rate: 60 fps

Video quality

☒ Constant bit rate:

Bit rate restriction: ☒ Average ☐ Upper bound

Target bit rate: 6 Mbps

Policy: Frame rate priority

☐ Fixed quality: Good

#### ■ Frame size

You can set up different video resolution for different viewing devices. For example, set a smaller frame size and lower bit rate for remote viewing on mobile phones and a larger video size and a higher bit rate for live viewing on web browsers. Note that a larger frame size takes up more bandwidth.

#### ■ Maximum frame rate

This limits the maximum refresh frame rate per second. Set the frame rate higher for smoother video quality.

If the power line frequency is set to 50Hz, the frame rates are selectable at 1fps, 2fps, 3fps, 5fps, 8fps, 10fps, 15fps, 20fps, and 25fps. If the power line frequency is set to 60Hz, the frame rates are selectable at 1fps, 2fps, 3fps, 5fps, 8fps, 10fps, 15fps, 20fps, 25fps, and 30fps. You can also select **Customize** and manually enter a value.

#### ■ Video quality

Refer to the previous page setting an average or upper bound threshold for controlling the bandwidth consumed for transmitting motion jpegs. The configuration method is identical to that for MPEG4 and H.264.

## Network > General settings

This section explains how to configure a wired network connection for the Network Camera.

### Network Type

### LAN

Select this option when the Network Camera is deployed on a local area network (LAN) and is intended to be accessed by local computers. The default setting for the Network Type is LAN. Remember to click **Save** when you complete the Network setting.

Get IP address automatically: Select this option to obtain an available dynamic IP address assigned by the DHCP server each time the camera is connected to the LAN.

Use fixed IP address: Select this option to manually assign a static IP address to the Network Camera.

1. You can make use of VIVOTEK Installation Wizard 2 on the software CD to easily set up the Network Camera on LAN. Please refer to Software Installation on page 12 for details.
2. Enter the Static IP, Subnet mask, Default router, and Primary DNS provided by your ISP.

Subnet mask: This is used to determine if the destination is in the same subnet. The default value is "255.255.255.0".

Default router: This is the gateway used to forward frames to destinations in a different subnet. Invalid router setting will fail the transmission to destinations in different subnet.

Primary DNS: The primary domain name server that translates hostnames into IP addresses.

Secondary DNS: Secondary domain name server that serves as a backup to the Primary DNS.

Primary WINS server: The primary WINS server that maintains the database of computer names and IP addresses.

Secondary WINS server: The secondary WINS server that maintains the database of computer names and IP addresses.

Enable UPnP presentation: Select this option to enable UPnP™ presentation for your Network Camera so that whenever a Network Camera is presented to the LAN, shortcuts of connected Network Cameras will be listed in My Network Places. You can click the shortcut to link to the web browser. Currently, UPnP™ is supported by Windows XP or later. Note that to utilize this feature, please make sure the UPnP™ component is installed on your computer.

Enable UPnP port forwarding: To access the Network Camera from the Internet, select this option to allow the Network Camera to open ports automatically on the router so that video streams can be sent out from a LAN. To utilize of this feature, make sure that your router supports UPnP™ and it is activated.

### PPPoE (Point-to-point over Ethernet)

Select this option to configure your Network Camera to make it accessible from anywhere as long as there is an Internet connection. Note that to utilize this feature, it requires an account provided by your ISP.

Follow the steps below to acquire your Network Camera's public IP address.

1. Set up the Network Camera on the LAN.
2. Go to Configuration > Event > Event settings > Add server (please refer to Add server on page 85) to add a new email or FTP server.
3. Go to Configuration > Event > Event settings > Add media (please refer to Add media on page 90).

Select System log so that you will receive the system log in TXT file format which contains the Network Camera's public IP address in your email or on the FTP server.

4. Go to Configuration > Network > General settings > Network type. Select PPPoE and enter the user name and password provided by your ISP. Click **Save** to enable the setting.

**Network type**

☐ LAN  
☒ PPPoE

User name:   
 Password:   
 Confirm password:

☐ Enable IPv6

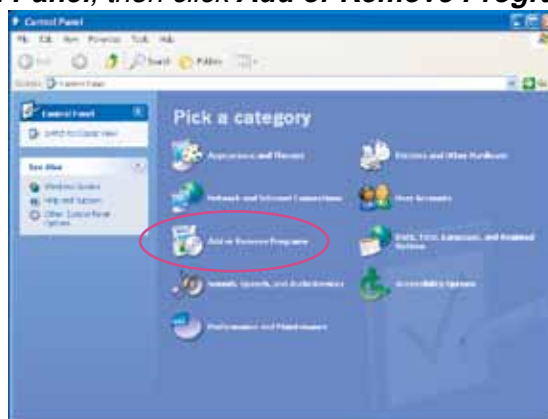

5. The Network Camera will reboot.

6. Disconnect the power to the Network Camera; remove it from the LAN environment.

**NOTE:**

- ▶ If the default ports are already used by other devices connected to the same router, the Network Camera will select other ports for the Network Camera.
- ▶ If UPnP™ is not supported by your router, you will see the following message:  
**Error: Router does not support UPnP port forwarding.**
- ▶ Below are steps to enable the UPnP™ user interface on your computer:  
Note that you must log on to the computer as a system administrator to install the UPnP™ components.

1. Go to Start, click **Control Panel**, then click **Add or Remove Programs**.

2. In the Add or Remove Programs dialog box, click **Add/Remove Windows Components**.

3. In the Windows Components Wizard dialog box, select **Networking Services** and click **Details**.

4. In the Networking Services dialog box, select **Universal Plug and Play** and click **OK**.

5. Click **Next** in the following window.

6. Click **Finish**. UPnP™ is enabled.

► **How does UPnP™ work?**

UPnP™ networking technology provides automatic IP configuration and dynamic discovery of devices added to a network. Services and capabilities offered by networked devices, such as printing and file sharing, are available among each other without the need for cumbersome network configuration. In the case of Network Cameras, you will see Network Camera shortcuts under My Network Places.

► **Enabling UPnP port forwarding allows the Network Camera to open a secondary HTTP port on the router-not HTTP port-meaning that you have to add the secondary HTTP port number to the Network Camera's public address in order to access the Network Camera from the Internet. For example, when the HTTP port is set to 80 and the secondary HTTP port is set to 8080, refer to the list below for the Network Camera's IP address.**

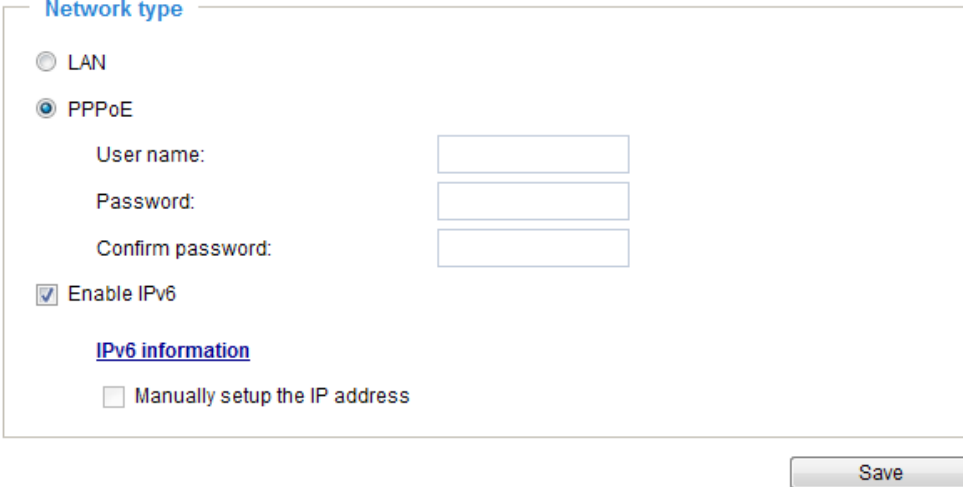

From the Internet	In LAN
http://203.67.124.123:8080	http://192.168.4.160 or http://192.168.4.160:8080

► **If the PPPoE settings are incorrectly configured or the Internet access is not working, restore the Network Camera to factory default; please refer to Restore on page 38 for details. After the Network Camera is reset to factory default, it will be accessible on the LAN.**

## Enable IPv6

Select this option and click **Save** to enable IPv6 settings.

Please note that this only works if your network environment and hardware equipment support IPv6. The browser should be Microsoft® Internet Explorer 6.5, Mozilla Firefox 3.0 or above.

**Network type**

☐ LAN

☒ PPPoE

User name:

Password:

Confirm password:

☒ Enable IPv6

[IPv6 information](#)

☐ Manually setup the IP address

**Save**

When IPv6 is enabled, by default, the network camera will listen to router advertisements and be assigned with a link-local IPv6 address accordingly.

**IPv6 Information:** Click this button to obtain the IPv6 information as shown below.

close

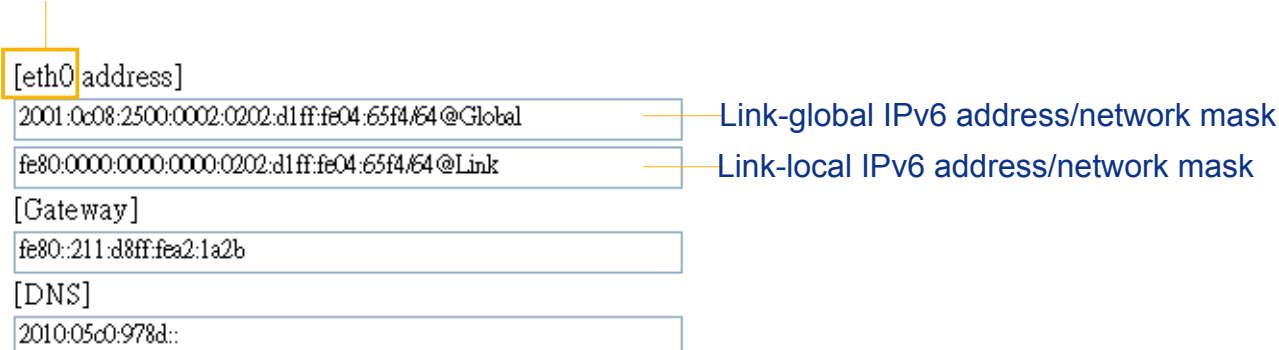

[eth0 address]  
fe80:0000:0000:0000:0202:d1ff:fe0e:d4c8/64@Link

[Gateway]  
IPv6 address list of gateway

[DNS]  
IPv6 address list of DNS

If your IPv6 settings are successful, the IPv6 address list will be listed in the pop-up window. The IPv6 address will be displayed as follows:

## Refers to Ethernet

[eth0 address]

2001:0c08:2500:0002:0202:d1ff:fe04:65f4/64@Global — Link-global IPv6 address/network mask

fe80:0000:0000:0000:0202:d1ff:fe04:65f4/64@Link — Link-local IPv6 address/network mask

[Gateway]  
fe80::211:d8ff:fea2:1a2b

[DNS]  
2010:05c0:978d::

Please follow the steps below to link to an IPv6 address:

1. Open your web browser.
2. Enter the link-global or link-local IPv6 address in the address bar of your web browser.
3. The format should be:

`http://[2001:0c08:2500:0002:0202:d1ff:fe04:65f4]/`

↑  
IPv6 address

4. Press **Enter** on the keyboard or click **Refresh** button to refresh the webpage.  
For example:

#### NOTE:

- If you have a Secondary HTTP port (the default value is 8080), you can also link to the webpage in the following address format: (Please refer to **HTTP** streaming on page 58 for detailed information.)

`http://[2001:0c08:2500:0002:0202:d1ff:fe04:65f4]/:8080`

↑  
IPv6 address

↑  
Secondary HTTP port

- If you choose PPPoE as the Network Type, the [PPP0 address] will be displayed in the IPv6 information column as shown below.

[eth0 address]
fe80:0000:0000:0000:0202:d1ff:fe11:2299/64@Link
[ppp0 address]
fe80:0000:0000:0000:0202:d1ff:fe11:2299/10@Link
2001:b100:01c0:0002:0202:d1ff:fe11:2299/64@Global
[Gateway]
fe80::90:1a00:4142:8ced
[DNS]
2001:b000::1

**Manually setup the IP address:** Select this option to manually set up IPv6 settings if your network environment does not have DHCPv6 server and router advertisements-enabled routers. If you check this item, the following blanks will be displayed for you to enter the corresponding information:

☒ Enable IPv6IPv6 information☒ Manually setup the IP addressOptional IP address / Prefix length  / 64Optional default router Optional primary DNS **Port**

port	
HTTPS port:	<input type="text" value="443"/>
FTP port:	<input type="text" value="21"/>

Save

HTTPS port: By default, the HTTPS port is set to 443. It can also be assigned to another port number between 1025 and 65535.

FTP port: The FTP server allows the user to save recorded video clips. You can utilize VIVOTEK's Installation Wizard 2 to upgrade the firmware via FTP server. By default, the FTP port is set to 21. It also can be assigned to another port number between 1025 and 65535.

## Network > Streaming protocols Advanced Mode

### HTTP streaming

To utilize HTTP authentication, make sure that you have set a password for the Network Camera first; please refer to Security > User account on page 67 for details.

HTTP streaming RTSP streaming

Authentication: basic

HTTP port: 80

Secondary HTTP port: 8080

Access name for stream 1: video.mjpg

Access name for stream 2: video2.mjpg

Access name for stream 3: video3.mjpg

Access name for stream 4: video4.mjpg

Access name for stream 5: videoany.mjpg

Save

Authentication: Depending on your network security requirements, the Network Camera provides two types of security settings for an HTTP transaction: basic and digest.

If **basic** authentication is selected, the password is sent in plain text format and there can be potential risks of being intercepted. If **digest** authentication is selected, user credentials are encrypted using MD5 algorithm and thus provide better protection against unauthorized accesses.

HTTP port / Secondary HTTP port: By default, the HTTP port is set to 80 and the secondary HTTP port is set to 8080. They can also be assigned to another port number between 1025 and 65535. If the ports are incorrectly assigned, the following warning messages will be displayed:

To access the Network Camera on the LAN, both the HTTP port and secondary HTTP port can be used to access the Network Camera. For example, when the HTTP port is set to 80 and the secondary HTTP port is set to 8080, refer to the list below for the Network Camera's IP address.

#### On the LAN

http://192.168.4.160 or  
http://192.168.4.160:8080

Access name for stream #1 ~ #5: This Network camera supports multiple streams simultaneously. The access name is used to differentiate the streaming source. Users can click **Media > Video > Stream settings** to set up the video quality of linked streams. For more information about how to set up the video quality, please refer to Stream settings on page 47.

When using **Mozilla Firefox** or **Netscape** to access the Network Camera and the video mode is set to JPEG, users will receive video comprised of continuous JPEG images. This technology, known as "server push", allows the Network Camera to feed live pictures to Mozilla Firefox and Netscape.

URL command -- <http://<ip address>:<http port>/<access name for a specific stream>>

For example, when the Access name for **stream 2** is set to **video2.mjpg**:

1. Launch Mozilla Firefox or Netscape.
2. Type the above URL command in the address bar. Press **Enter**.
3. The JPEG images will be displayed in your web browser.

#### NOTE:

- Microsoft® Internet Explorer **does not** support server push technology; therefore, you will not be able to access the camera using the <http://<ip address>:<http port>/<access name for a specific stream >> command.
- Users can only use URL commands to request the stream 5. For more information about URL commands, please refer to page 108.

## RTSP Streaming

To utilize RTSP streaming authentication, make sure that you have set a password for controlling the access to video stream first. Please refer to Security > User account on page 67 for details.

HTTP streaming

RTSP streaming

Authentication:

disable

Access name for stream 1:

live.sdp

Access name for stream 2:

✦ Multicast settings for stream 1

✦ Multicast settings for stream 2

✦ Multicast settings for stream 3

✦ Multicast settings for stream 4

Save

**Authentication:** Depending on your network security requirements, the Network Camera provides three types of security settings for streaming via RTSP protocol: disable, basic, and digest.

If **basic** authentication is selected, the password is sent in plain text format, but there can be potential risks of it being intercepted. If **digest** authentication is selected, user credentials are encrypted using MD5 algorithm, thus providing better protection against unauthorized access.

The availability of the RTSP streaming for the three authentication modes is listed in the following table:

	Quick Time player	VLC
Disable	O	O
Basic	O	O
Digest	O	X

**Access name for stream #1 ~ #5:** This Network camera supports multiple streams simultaneously. The access name is used to differentiate the streaming source. In this way, streams of different qualities can suffice different purposes.

If you want to use an **RTSP player** to access the Network Camera, you have to set the video mode to **H.264 / MPEG-4** and use the following RTSP URL command to request transmission of the streaming data.

**rtsp://<ip address>:<rtsp port>/<access name for a specific stream>**

For example, when the access name for **stream 1** is set to **live.sdp**:

1. Launch an RTSP player.
2. Choose File > Open URL. A URL dialog box will pop up.
3. Type the above URL command in the text box.
4. The live video will be displayed in your player as shown below.

**RTSP port /RTP port for video, audio/ RTCP port for video, audio**

- RTSP (Real-Time Streaming Protocol) controls the delivery of streaming media. By default, the port number is set to 554.
- The RTP (Real-time Transport Protocol) is used to deliver video data to the clients. By default, the RTP port for video is set to 5556 and the RTP port for audio is set to 5558.
- The RTCP (Real-time Transport Control Protocol) allows the Network Camera to transmit the data by monitoring the Internet traffic volume. By default, the RTCP port for video is set to 5557 and the RTCP port for audio is set to 5559.

The port numbers can be changed to values between 1025 and 65535. The RTP port must be an even number and the RTCP port is the RTP port number plus one, and thus is always an odd number. When the RTP port changes, the RTCP port will change accordingly.

If the RTP ports are incorrectly assigned, the following warning message will be displayed:

Multicast settings for stream 1, 2, 3, and 4: Click the items to display the detailed configuration information. Select the Always multicast option to enable multicast for stream 1 or 2.

<p>✦ Multicast settings for stream 1</p> <p><input type="checkbox"/> Always multicast</p> <p>Multicast group address: <input type="text" value="239.128.1.99"/></p> <p>Multicast video port: <input type="text" value="5560"/></p> <p>Multicast RTCP video port: <input type="text" value="5561"/></p> <p>Multicast TTL [1~255]: <input type="text" value="15"/></p>	<p>✦ Multicast settings for stream 3</p> <p><input type="checkbox"/> Always multicast</p> <p>Multicast group address: <input type="text" value="239.128.1.101"/></p> <p>Multicast video port: <input type="text" value="5568"/></p> <p>Multicast RTCP video port: <input type="text" value="5569"/></p> <p>Multicast TTL [1~255]: <input type="text" value="15"/></p>
<p>✦ Multicast settings for stream 2</p> <p><input type="checkbox"/> Always multicast</p> <p>Multicast group address: <input type="text" value="239.128.1.100"/></p> <p>Multicast video port: <input type="text" value="5564"/></p> <p>Multicast RTCP video port: <input type="text" value="5565"/></p> <p>Multicast TTL [1~255]: <input type="text" value="15"/></p>	<p>✦ Multicast settings for stream 4</p> <p><input type="checkbox"/> Always multicast</p> <p>Multicast group address: <input type="text" value="239.128.1.102"/></p> <p>Multicast video port: <input type="text" value="5572"/></p> <p>Multicast RTCP video port: <input type="text" value="5573"/></p> <p>Multicast TTL [1~255]: <input type="text" value="15"/></p>

Unicast video transmission delivers a stream through point-to-point transmission; multicast, on the other hand, sends a stream to the multicast group address and allows multiple clients to acquire the stream at the same time by requesting a copy from the multicast group address. Therefore, enabling multicast can effectively save Internet bandwidth.

The ports can be changed to values between 1025 and 65535. The multicast RTP port must be an even number and the multicast RTCP port number is the multicast RTP port number plus one, and thus is always odd. When the multicast RTP port changes, the multicast RTCP port will change accordingly.

If the multicast RTP video ports are incorrectly assigned, the following warning message will be displayed:

Multicast TTL [1~255]: The multicast TTL (Time To Live) is the value that tells the router the range a packet can be forwarded.

## Network > DDNS

This section explains how to configure the dynamic domain name service for the Network Camera. DDNS is a service that allows your Network Camera, especially when assigned with a dynamic IP address, to have a fixed host and domain name.

### DDNS: Dynamic domain name service

**Enable DDNS:** Select this option to enable the DDNS setting.

**Provider:** Select a DDNS provider from the provider drop-down list.

Save

VIVOTEK offers [Safe100.net](#), a free dynamic domain name service, to VIVOTEK customers. It is recommended that you register [Safe100.net](#) to access VIVOTEK's Network Cameras from the Internet. Additionally, we offer other DDNS providers, such as Dyndns.org(Dynamic), Dyndns.org(Custom), TZO.com, DHS.org, CustomSafe100, dyn-interfree.it.

Note that before utilizing this function, please apply for a dynamic domain account first.

#### ■ [Safe100.net](#)

1. In the DDNS column, select [Safe100.net](#) from the drop-down list. Click **I accept** after reviewing the terms of the Service Agreement.
2. In the Register column, fill in the Host name (xxxx.safe100.net), Email, Key, and Confirm Key, and click **Register**. After a host name has been successfully created, a success message will be displayed in the DDNS Registration Result column.

3. Click **Copy** and all the registered information will automatically be uploaded to the corresponding fields in the DDNS column at the top of the page as seen in the picture.

**DDNS: Dynamic domain name service**

☒ Enable DDNS:

Provider: Safe100.net [\*.safe100.net]

Host name: VTK.safe100.net

Email: wtk@vivotek.com

Key: ....

**Save**

---

**Register**

Host name: VTK.safe100.net

Email: wtk@vivotek.com

Key: .... **Forget key**

Confirm key: ....

To apply for a domain name for the camera, or to modify the previously registered information, fill in the following fields and then click "Register".

**Register**

DDNS Registration Result:

[Register] Successfully Your account information has been mailed to registered e-mail address

Upon successful registration, you can click [copy](#) to automatically upload relevant information to the DDNS form or you can manually fill it in. Then, click "Save" to save new settings.

4. Select Enable DDNS and click **Save** to enable the setting.

#### ■ CustomSafe100

VIVOTEK offers documents to establish a CustomSafe100 DDNS server for distributors and system integrators. You can use CustomSafe100 to register a dynamic domain name if your distributor or system integrators offer such services.

1. In the DDNS column, select CustomSafe100 from the drop-down list.
2. In the Register column, fill in the Host name, Email, Key, and Confirm Key; then click **Register**. After a host name has been successfully created, you will see a success message in the DDNS Registration Result column.
3. Click **Copy** and all for the registered information will be uploaded to the corresponding fields in the DDNS column.
4. Select Enable DDNS and click **Save** to enable the setting.

**Forget key:** Click this button if you have forgotten the key to Safe100.net or CustomSafe100. Your account information will be sent to your email address.

Refer to the following links to apply for a dynamic domain account when selecting other DDNS providers:

- [Dyndns.org\(Dynamic\)](http://www.dyndns.org) / [Dyndns.org\(Custom\)](http://www.dyndns.org): visit <http://www.dyndns.com/>
- [TZO.com](http://www.tzo.com): visit <http://www.tzo.com/>
- [DHS.org](http://www.dhs.org): visit <http://www.dhs.org/>
- [dyn-interfree.it](http://dyn-interfree.it): visit <http://dyn-interfree.it/>

## Network > QoS (Quality of Service) Advanced Mode

Quality of Service refers to a resource reservation control mechanism, which guarantees the quality to different services on the network. Quality of service guarantees are important if the network capacity is insufficient, especially for real-time streaming of multimedia applications. Quality can be defined as, for instance, a maintained level of bit rate, low latency, no packet dropping, etc.

The following are the main benefits of a QoS-aware network:

- The ability to prioritize traffic and guarantee a certain level of performance to the data flow.
- The ability to control the amount of bandwidth each application may use, and thus provide higher reliability and stability on the network.

### Requirements for QoS

To utilize QoS in a network environment, the following requirements must be met:

- All network switches and routers in the network must include support for QoS.
- The network video devices used in the network must be QoS-enabled.

### QoS models

#### CoS (the VLAN 802.1p model)

IEEE802.1p defines a QoS model at OSI Layer 2 (Data Link Layer), which is called CoS, Class of Service. It adds a 3-bit value to the VLAN MAC header, which indicates the frame priority level from 0 (lowest) to 7 (highest). The priority is set up on the network switches, which then use different queuing disciplines to forward the packets.

Below is the setting column for CoS. Enter the **VLAN ID** of your switch (0~4095) and choose the priority for each application (0~7).

**CoS**

☒ Enable CoS

VLAN ID:	<input style="width: 50px;" type="text" value="1"/>
Live video:	<input style="width: 50px;" type="text" value="0"/> ▼
Event/Alarm:	<input style="width: 50px;" type="text" value="0"/> ▼
Management:	<input style="width: 50px;" type="text" value="0"/> ▼

If you assign Video the highest level, the switch will handle video packets first.

#### NOTE:

- ▶ A VLAN-capable switch (802.1p) is required. The web browsing may fail if the CoS setting is incorrect.
- ▶ Class of Service technologies do not guarantee a level of service in terms of bandwidth and delivery time; they offer a "best-effort." Users can think of CoS as "coarsely-grained" traffic control and QoS as "finely-grained" traffic control.
- ▶ Although CoS is simple to manage, it lacks scalability and does not offer end-to-end guarantees since it is based on L2 protocol.

### QoS/DSCP (the DiffServ model)

DSCP-ECN defines QoS at Layer 3 (Network Layer). The Differentiated Services (DiffServ) model is based on packet marking and router queuing disciplines. The marking is done by adding a field to the IP header, called the DSCP (Differentiated Services Codepoint). This is a 6-bit field that provides 64 different class IDs. It gives an indication of how a given packet is to be forwarded, known as the Per Hop Behavior (PHB). The PHB describes a particular service level in terms of bandwidth, queueing theory, and dropping (discarding the packet) decisions. Routers at each network node classify packets according to their DSCP value and give them a particular forwarding treatment; for example, how much bandwidth to reserve for it.

Below are the configuration options of DSCP (DiffServ Codepoint). Specify the DSCP value for each application (0~63).

**QoS/DSCP**

☒ Enable QoS/DSCP

Live video:	<input type="text" value="0"/>
Event/Alarm:	<input type="text" value="0"/>
Management:	<input type="text" value="0"/>

Save

## Network > SNMP (Simple Network Management Protocol) Advanced Mode

This section explains how to use the SNMP on the network camera. The Simple Network Management Protocol is an application layer protocol that facilitates the exchange of management information between network devices. It helps network administrators to remotely manage network devices and find, solve network problems with ease.

- The SNMP consists of the following three key components:
  1. Manager: Network-management station (NMS), a server which executes applications that monitor and control managed devices.
  2. Agent: A network-management software module on a managed device which transfers the status of managed devices to the NMS.
  3. Managed device: A network node on a managed network. For example: routers, switches, bridges, hubs, computer hosts, printers, IP telephones, network cameras, web server, and database.

Before configuring SNMP settings on the this page, please enable your NMS first.

### SNMP Configuration

#### Enable SNMPv1, SNMPv2c

Select this option and enter the names of Read/Write community and Read Only community according to your NMS settings.

☒ Enable SNMPv1, SNMPv2c

**SNMPv1, SNMPv2c Settings**

Read/Write community:

Read only community:

#### Enable SNMPv3

This option contains cryptographic security, a higher security level, which allows you to set the Authentication password and the Encryption password.

- Security name: According to your NMS settings, choose Read/Write or Read Only and enter the community name.
- Authentication type: Select MD5 or SHA as the authentication method.
- Authentication password: Enter the password for authentication (at least 8 characters).
- Encryption password: Enter a password for encryption (at least 8 characters).

☒ Enable SNMPv3

**SNMPv3 Settings**

Read/Write Security name:

Authentication Type:

Authentication Password:

Encryption Password:

## Security > User Account

This section explains how to enable password protection and create multiple accounts.

### Root Password

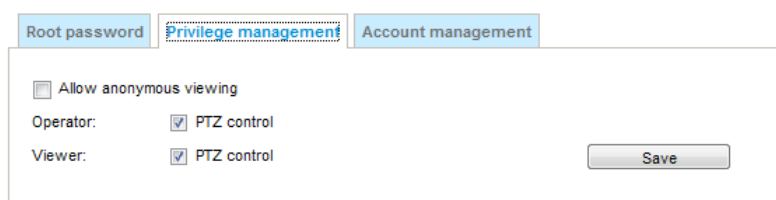

The form is titled "Root password". It contains two text input fields: "Root password:" and "Confirm root password:". To the right of the second field is a "Save" button.

The administrator account name is "root", which is permanent and can not be deleted. If you want to add more accounts in the Manage User column, please apply the password for the "root" account first.

1. Type the password identically in both text boxes, then click **Save** to enable password protection.
2. A window will be prompted for authentication; type the correct user's name and password in their respective fields to access the Network Camera.

### Privilege Management **Advanced Mode**

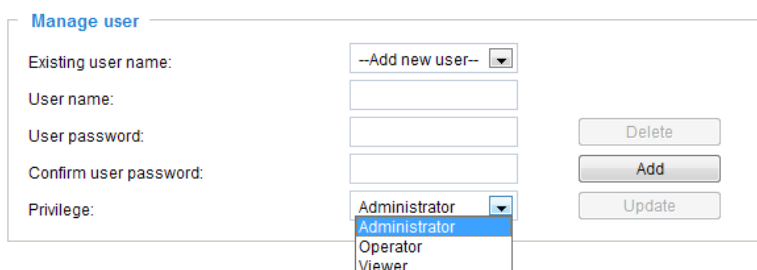

The form has three tabs: "Root password", "Privilege management", and "Account management". The "Privilege management" tab is active. It contains a checkbox "Allow anonymous viewing" which is unchecked. Below it are two rows: "Operator:" with a checked "PTZ control" checkbox, and "Viewer:" with a checked "PTZ control" checkbox. A "Save" button is on the right.

**PTZ control:** You can modify the management privilege for operators or viewers. Select or deselect the checkboxes, then click **Save** to enable the settings. If you give Viewers the privilege, Operators will also have the ability to control the Network Camera through the main page. (Please refer to **Configuration** on page 29).

**Allow anonymous viewing:** If you check this item, any client can access the live stream without entering a User ID and Password.

### Account Management

The form is titled "Manage user". It has a dropdown menu "Existing user name:" with "--Add new user--" selected. Below are four text input fields: "User name:", "User password:", "Confirm user password:", and "Privilege:". To the right of the "Privilege:" field is a dropdown menu showing "Administrator", "Operator", and "Viewer". To the right of the input fields are three buttons: "Delete", "Add", and "Update".

Administrators can create up to 20 user accounts.

1. Input the new user's name and password.
2. Select the privilege level for the new user account. Click **Add** to enable the setting.

Access rights are sorted by user privilege (Administrator, Operator, and Viewer). Only administrators can access the Configuration page. Although operators cannot access the Configuration page, they can use the URL Commands to get and set the value of parameters. For more information, please refer to URL Commands of the Network Camera on page 108. Viewers can only access the main page for live viewing.

Here you also can change a user's access rights or delete user accounts.

1. Select an existing account to modify.
2. Make necessary changes and click **Update** or **Delete** to enable the setting.

## Security > HTTPS (Hypertext Transfer Protocol over SSL) Advanced Mode

This section explains how to enable authentication and encrypted communication over SSL (Secure Socket Layer). It helps protect streaming data transmission over the Internet on higher security level.

### Create and Install Certificate Method

Before using HTTPS for communication with the Network Camera, a **Certificate** must be created first. There are three ways to create and install a certificate:

#### Create self-signed certificate

1. Select this option from a pull-down menu.
2. In the first column, select **Enable HTTPS secure connection**, then select a connection option: "HTTP & HTTPS" or "HTTPS only".
3. Click **Create certificate** to generate a certificate.

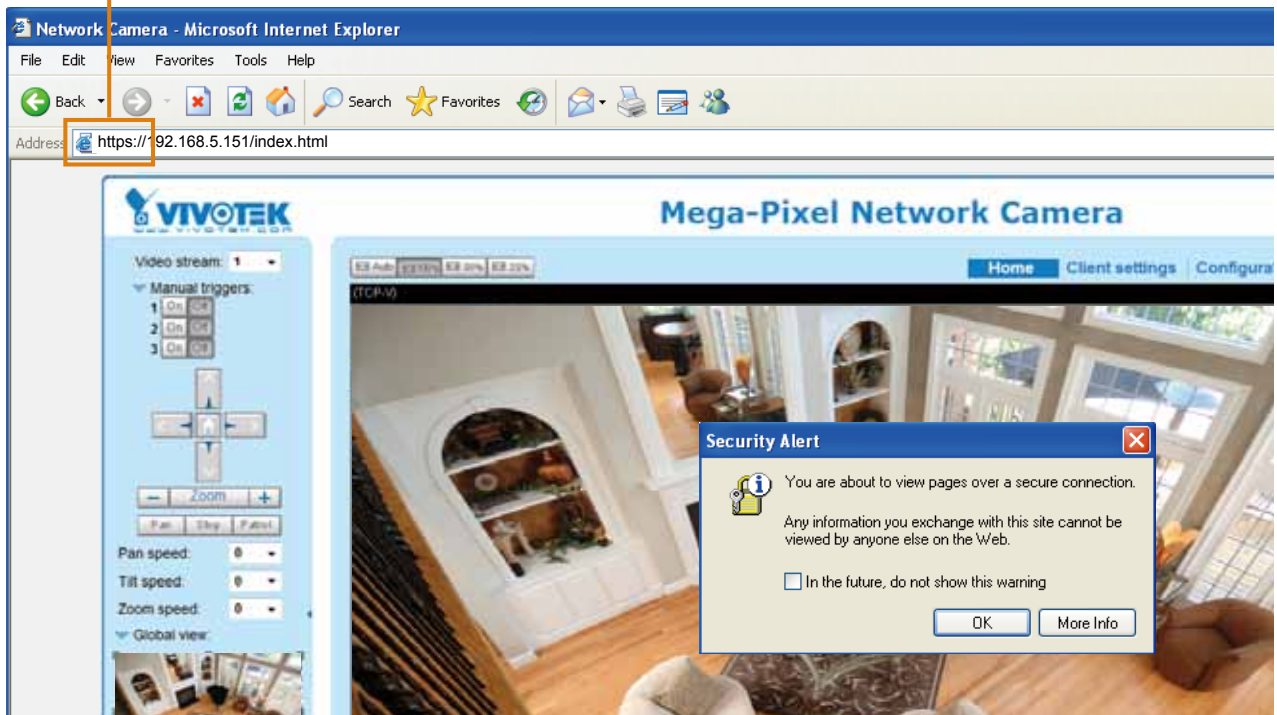

The screenshot shows the 'HTTPS' configuration page. The 'Enable HTTPS secure connection' checkbox is checked. Under 'Mode', 'HTTP & HTTPS' is selected. Under 'Certificate', the 'Create self-signed certificate' method is chosen. A modal box says 'Please wait while the certificate is being generated...' with a progress bar. The 'Certificate information' section shows fields for Country (TW), State or province (Asia), Locality (Asia), Organization (VIVOTEK, Inc), Organization unit (VIVOTEK, Inc), Common name (www.vivotek.com), and Validity (3650 days). The 'Create certificate' button is highlighted with a yellow box.

4. The Certificate Information will automatically be displayed as shown below. You can click **Certificate properties** to view detailed information about the certificate.

The screenshot shows the 'Certificate information' section. The status is 'Active'. The method is 'Create self-signed certificate'. The fields for Country, State or province, Locality, Organization, Organization unit, Common name, and Validity are the same as in the previous screenshot. The 'Certificate properties' link is highlighted, and the 'Remove certificate' button is visible.

5. Click **Home** to return to the main page. Change the address from “<http://>” to “<https://>” in the address bar and press **Enter** on your keyboard. Some Security Alert dialogs will pop up. Click **OK** or **Yes** to enable HTTPS.

**https://**

**Create certificate and install** : Select this option if you want to create a certificate from a certification authority.

1. Select this option from a method pull-down menu.
2. Click **Create certificate** to generate the certificate.

## Security > Access List Advanced Mode

This section explains how to control access permission by verifying the client PC's IP address.

### General Settings

General settings

Maximum number of concurrent streaming: 10 ▼
Connection management

Maximum number of concurrent streaming connection(s) limited to: Simultaneous live viewing for 1~10 clients (including stream 1 to stream 3). The default value is 10. If you modify the value and click **Save**, all current connections will be disconnected and automatically attempt to re-link (IE Explorer or Quick Time Player).

Connection Management: Click this button to display the connection status window showing a list of the current connections. For example:

	IP address	Elapsed time	User ID
<input type="checkbox"/>	172.16.2.53	00:00:05	
<input type="checkbox"/>	192.168.4.104	01:49:35	
<span>Refresh</span> <span>Add to deny list</span> <span>Disconnect</span> <span>Close</span>			

Note that only consoles that are currently displaying live streaming will be listed in the Connection Management window.

- IP address: Current connections to the Network Camera.
- Elapsed time: How much time the client has been at the webpage.
- User ID: If the administrator has set a password for the webpage, the clients have to enter a user name and password to access the live video. The user name will be displayed in the User ID column. If the administrator allows clients to link to the webpage without a user name and password, the User ID column will be empty.

There are some situations that allow clients access to the live video without a user name and password:

1. The administrator does not set up a root password. For more information about how to set up a root password and manage user accounts, please refer to Security > User account on page 67.
2. The administrator has set up a root password, but set **RTSP Authentication** to "disable". For more information about **RTSP Authentication**, please refer to RTSP Streaming on page 59.
3. The administrator has set up a root password, but allows anonymous viewing. For more information about **Allow Anonymous Viewing**, please refer to page 67.

- **Refresh:** Click this button to refresh all current connections.
- **Add to deny list:** You can select entries from the Connection Status list and add them to the Deny List to deny access. Please note that those checked connections will only be disconnected temporarily and will automatically try to re-link again (IE Explore or Quick Time Player). If you want to enable the denied list, please check **Enable access list filtering** and click **Save** in the first column.
- **Disconnect:** If you want to break off the current connections, please select them and click this button. Please note that those checked connections will only be disconnected temporarily and will automatically try to re-link again (IE Explore or Quick Time Player).

## Filter

**Enable access list filtering:** Check this item and click **Save** if you want to enable the access list filtering function.

**Filter type:** Select **Allow** or **Deny** as the filter type. If you choose **Allow Type**, only those clients whose IP addresses are on the Access List below can access the Network Camera, and the others cannot. On the contrary, if you choose **Deny Type**, those clients whose IP addresses are on the Access List below will not be allowed to access the Network Camera, and the others can.

Then you can **Add** a rule to the following Access List. Please note that the IPv6 access list column will not be displayed unless you enable IPv6 on the Network page. For more information about **IPv6 Settings**, please refer to Network > General settings on page 51 for detailed information.

If IPv6 filter list is preferred, you will be prompted by the following window. Enter the IPv6 address and the two-digit prefix length to specify the range of IP addresses in your configuration.

### >Add ipv6 filter list

There are three types of filter rules:

**Single:** This rule allows the user to add an IP address to the Allowed/Denied list.

For example:

**Filter address**

Rule:

IP address:

**Network:** This rule allows the user to assign a network address and corresponding subnet mask to the Allow/Deny List. The address and network mask are written in CIDR format.

For example:

**Filter address**

Rule:

Network address / Network mask:  /

IP address range 192.168.2.x will be blocked.

**Range:** This rule allows the user to assign a range of IP addresses to the Allow/Deny List.

Note: This rule only applies to IPv4 addresses.

For example:

**Filter address**

Rule:

IP address - IP address:  -

### Administrator IP address

**Always allow the IP address to access this device:** You can check this item and add the Administrator's IP address in this field to make sure the Administrator can always connect to the device.

**Administrator IP address**

☐ Always allow the IP address to access this device

## Security > IEEE 802.1X Advanced Mode

Enable this function if your network environment uses IEEE 802.1x, which is a port-based network access control. The network devices, intermediary switch/access point/hub, and RADIUS server must support and enable 802.1x settings.

The 802.1x standard is designed to enhance the security of local area networks, which provides authentication to network devices (clients) attached to a network port (wired or wireless). If all certificates between client and server are verified, a point-to-point connection will be enabled; if authentication fails, access on that port will be prohibited. 802.1x utilizes an existing protocol, the Extensible Authentication Protocol (EAP), to facilitate communication.

- The components of a protected network with 802.1x authentication:

1. Supplicant: A client end user (camera), which requests authentication.
2. Authenticator (an access point or a switch): A “go between” which restricts unauthorized end users from communicating with the authentication server.
3. Authentication server (usually a RADIUS server): Checks the client certificate and decides whether to accept the end user’s access request.

- VIVOTEK Network Cameras support two types of EAP methods to perform authentication: **EAP-PEAP** and **EAP-TLS**.

Please follow the steps below to enable 802.1x settings:

1. Before connecting the Network Camera to the protected network with 802.1x, please apply a digital certificate from a Certificate Authority (i.e., your network administrator) which can be validated by a RADIUS server.
2. Connect the Network Camera to a PC or notebook outside of the protected LAN. Open the configuration page of the Network Camera as shown below. Select **EAP-PEAP** or **EAP-TLS** as the EAP authentication method. In the following blanks, enter your ID and password issued by the CA, then upload related certificate(s).

**IEEE 802.1x**

☒ Enable IEEE 802.1x

EAP method: EAP-PEAP ▼

Identity:

Password:

CA certificate:  Browse... Upload

Status: no file Remove

**IEEE 802.1x**

☒ Enable 802.1x

EAP method: EAP-TLS ▼

Identity:

Private key password:

CA certificate:  Browse... Upload

Status: no file Remove

client certificate:  Browse... Upload

Status: no file Remove

Client private key:  Browse... Upload

Status: no file Remove

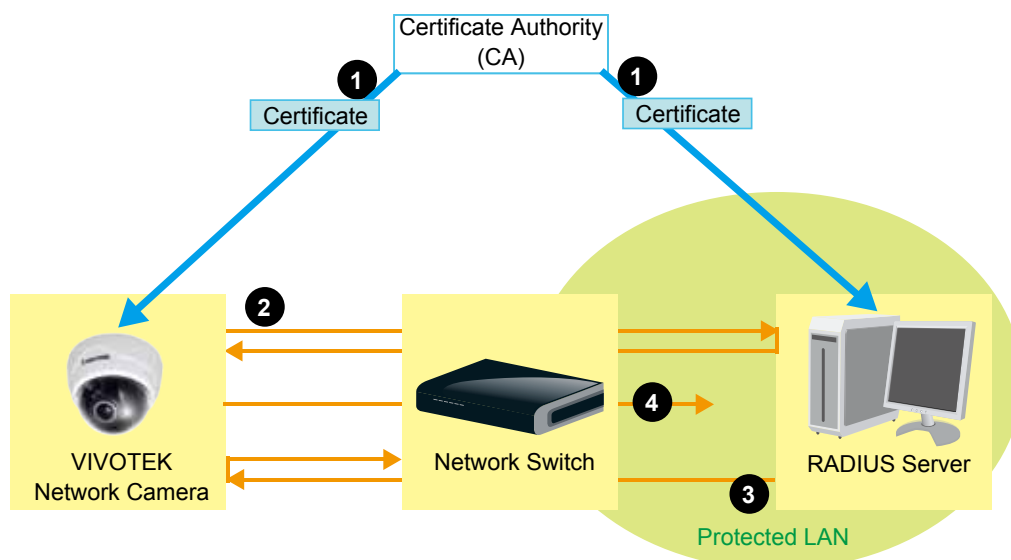

3. When all settings are complete, move the Network Camera to the protected LAN by connecting it to an 802.1x enabled switch. The devices will then start the authentication automatically.

#### NOTE:

► *The authentication process for 802.1x:*

1. The Certificate Authority (CA) provides the required signed certificates to the Network Camera (the supplicant) and the RADIUS Server (the authentication server).
2. A Network Camera requests access to the protected LAN using 802.1X via a switch (the authenticator). The client offers its identity and client certificate, which is then forwarded by the switch to the RADIUS Server, which uses an algorithm to authenticate the Network Camera and returns an acceptance or rejection back to the switch.
3. The switch also forwards the RADIUS Server's certificate to the Network Camera.
4. Assuming all certificates are validated, the switch then changes the Network Camera's state to authorized and is allowed access to the protected network via a pre-configured port.

## PTZ > PTZ settings Advanced Mode

This section explains how to control the Network Camera's Pan/Tilt/Zoom operation.

### Digital PTZ Operation (E-PTZ Operation)

The e-PTZ control settings section will be displayed as shown below:

Digital

Select stream: 1

(TCP-V) 2012/4/9 13:18:12

☒ Zoom factor display

Save

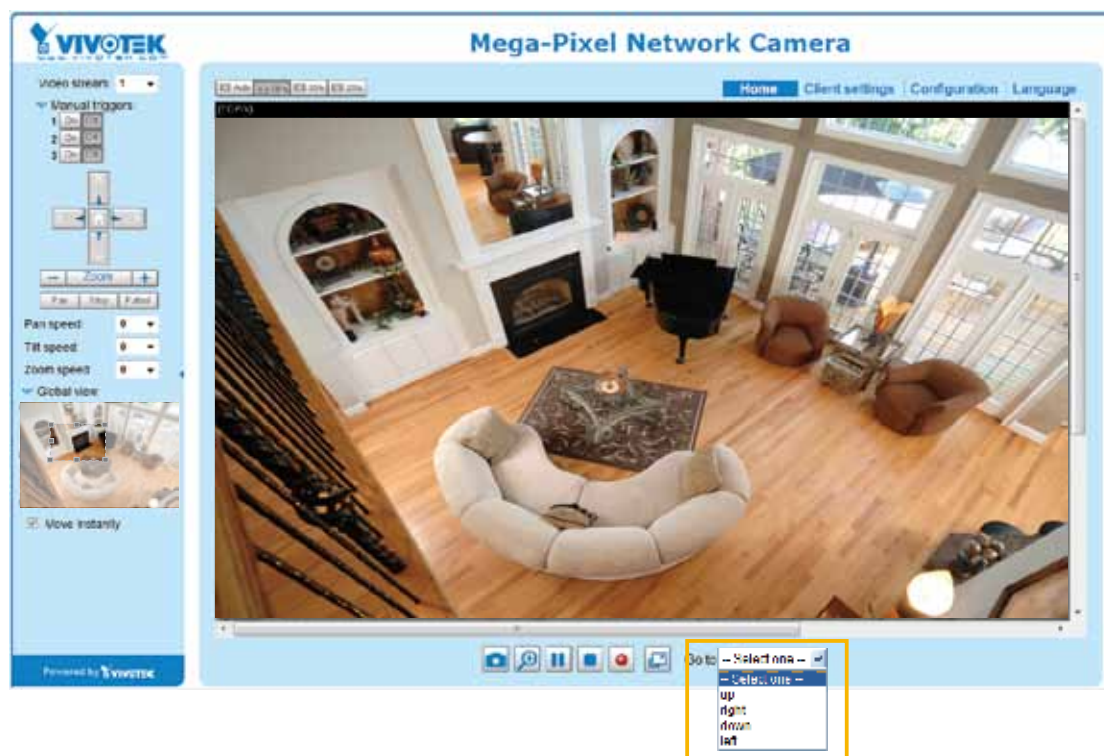

**Select Stream:** Select a video stream to set up the e-PTZ control. Please note that each stream can possess its own preset and patrol settings. For detailed information about how to set up preset and patrol settings, please refer to page 78.

**Auto pan/patrol speed:** Select the speed from 1~5 (slow/fast) to set up the Auto pan/patrol speed control.

When completed with the e-PTZ settings, click **Save** to enable the settings on this page.

## Home page in E-PTZ Mode

- The e-Preset Positions will also be displayed on the home page. Select one from the drop-down list, and the Network Camera will move to the selected position.
- If you have set up different preset positions for different streams, you can select one of the video streams to display its separate preset positions.

### Global View

In addition to using the e-PTZ control panel, you can also use the mouse to drag or resize the floating frame to pan/tilt/zoom the viewing region. The live view window will also move to the viewing region accordingly.

### Moving Instantly

If you check this item, the live view window will switch to the new viewing region instantly after you move the floating frame.

### Click on Image

The e-PTZ function also supports "Click on Image". When you click on any point of the Global View Window or Live View Window, the viewing region will also move to that point.

Note that the "Click on Image" function only applies when you have configured a smaller "Region of Interest" out of the maximum output frame: e.g., a 640x400 region from the camera's 1280x800 maximum frame size.

**Patrol button:** Click this button, then the Network Camera will patrol continuously along the preset positions.

## Patrol settings

You can select some preset positions for the Network Camera to patrol.

Please follow the steps below to set up a patrol schedule:

1. Select the preset locations on the list, and click .
2. The selected preset locations will be displayed on the **Patrol locations** list.
3. Set the **Dwelling time** for the live view to stay on a preset location during an auto patrol.
4. If you want to delete a preset location from the Patrol locations list, select it and click **Remove**.
5. Select a location and click   to rearrange the patrol order.
6. Select patrol locations you want to save in the list and click **Save** to enable the patrol settings.
7. To implement the patrol schedule, please go to homepage and click on the **Patrol** button. Please refer to the next page.

  - ▶ *Click Patrol: The Network Camera will patrol along the selected positions repeatedly. Please refer to page 80 to see more details.*
-

## Event > Event settings

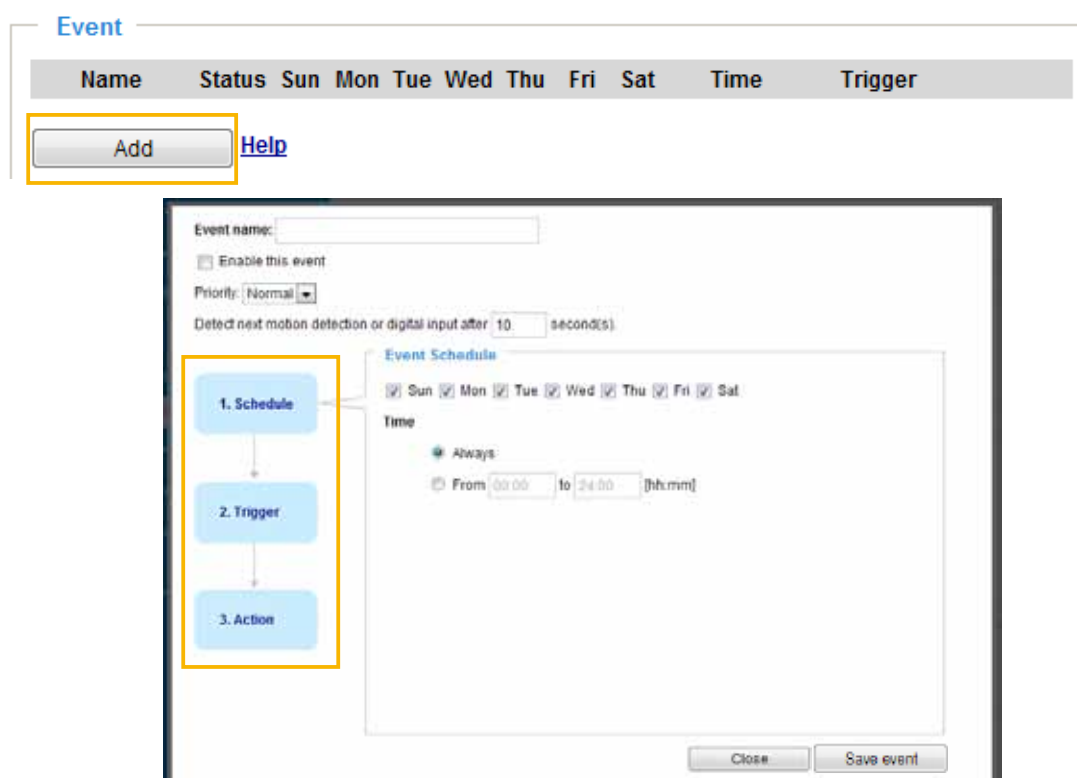

### Advanced Mode

This section explains how to configure the Network Camera to respond to particular situations (event). A typical application is that when a motion is detected, the Network Camera sends buffered images to an FTP server or e-mail address as notifications. Click on **Help**, there is an illustration shown in the pop-up window explaining that an event can be triggered by many sources, such as motion detection or external digital input devices. When an event is triggered, you can specify what type of action that will be performed. You can configure the Network Camera to send snapshots or videos to your email address or FTP site.

### Event

To set an event with recorded video or snapshots, it is necessary to configure the server and media settings so that the Network Camera will know what action to take (such as which server to send the media files to) when a trigger is activated. An event is an action initiated by a user-defined trigger source. In the **Event** column, click **Add** to open the event settings window. Here you can arrange three elements -- Schedule, Trigger, and Action to set an event. A total of 3 event settings can be configured.

- **Event name:** Enter a name for the event setting.
- **Enable this event:** Select this option to enable the event setting.
- **Priority:** Select the relative importance of this event (High, Normal, or Low). Events with a higher priority setting will be executed first.
- **Detect next event after ☐ seconds:** Enter the duration in seconds to pause motion detection after a motion is detected. This can prevent event-related actions to be too frequently performed.

### 1. Schedule

Specify the period of them during which the event trigger will take place. Please select the days of the week and the time in a day (in 24-hr time format) for the event triggering schedule.

### 2. Trigger

This is the cause or stimulus which defines when to trigger the Network Camera. The trigger source can be configured to use the Network Camera's built-in motion detection mechanism or external digital input devices.

There are several choices of trigger sources as shown on next page. Select the item to display the detailed configuration options.

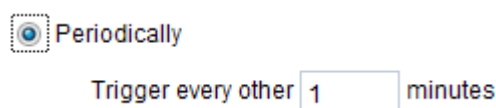

- **Video motion detection**

This option makes use of the built-in motion detection mechanism as a trigger source. To enable this function, you need to configure a Motion Detection Window first. For more information, please refer to Motion Detection on page 95 for details.

- **Periodically**

This option allows the Network Camera to trigger periodically for every other defined minute. Up to 999 minutes are allowed.

- **Digital input**

This option allows the Network Camera to use an external digital input device or sensor as a trigger source. Depending on your application, there are many choices of digital input devices on the market which helps to detect changes in temperature, vibration, sound, and light, etc.

- **System boot**

This option triggers the Network Camera when the power to the Network Camera is disconnected.

- **Recording notify**

This option allows the Network Camera to trigger when the recording disk is full or when recording starts to rewrite older data.

### ■ Camera tampering detection

This option allows the Network Camera to trigger when the camera detects that it is being tampered with. To enable this function, you need to configure the Tampering Detection option first. Please refer to page 98 for detailed information.

### ■ Manual Trigger

This option allows users to enable event triggers manually by clicking the on/off button on the homepage. Please configure 1 to 3 associated events before using this function.

☒ Manual Trigger

☐ 1 ☐ 2 ☐ 3

### 3. Action

Define the actions to be performed by the Network Camera when a trigger is activated.

Server	Media	Extra parameter
<input type="checkbox"/> SD	-----None-----	<a href="#">SD test</a> <a href="#">View</a>
<input type="checkbox"/> NAS	-----None-----	<input type="checkbox"/> Create folders by date time and hour automatically <a href="#">View</a>
<input type="checkbox"/> HTTP	-----None-----	

### ■ Backup media if the network is disconnected

Select this option to backup media file on SD card if the network is disconnected. This function will only be displayed after you set up a network storage (NAS).

## Add server

To set an event with recorded video or snapshots, it is necessary to configure the server and media settings so that the Network Camera will know what action to take (such as which server to send the media files to) when a trigger is activated. Click **Add server** to open the server setting window. You can specify where the notification messages are sent when a trigger is activated. A total of 5 server settings can be configured.

There are four choices of server types available: Email, FTP, HTTP, and Network storage. Select the item to display the detailed configuration options. You can configure either one or all of them.

### Server type - Email

Select to send the media files via email when a trigger is activated.

- **Server name:** Enter a name for the server setting.
- **Sender email address:** Enter the email address of the sender.
- **Recipient email address:** Enter the email address of the recipient.
- **Server address:** Enter the domain name or IP address of the email server.
- **User name:** Enter the user name of the email account if necessary.
- **Password:** Enter the password of the email account if necessary.
- **Server port:** The default mail server port is set to 25. You can also manually set another port.

If your SMTP server requires a secure connection (SSL), select **This server requires a secure connection (SSL)**.

To verify if the email settings are correctly configured, click **Test**. The result will be shown in a pop-up window. If successful, you will also receive an email indicating the result.

Click **Save server** to enable the settings.

Note that after you set up the first event server, the new event server will automatically display on the Server list. If you wish to add other server options, click **Add server**.

Server	Media	Extra parameter
<input type="checkbox"/> SD	-----None-----	<a href="#">SD test</a> <a href="#">View</a>
<input type="checkbox"/> Email	-----None-----	
<a href="#">Add server</a>		<a href="#">Add media</a>

### Server type - FTP

Select to send the media files to an FTP server when a trigger is activated.

Server name:

Server Type

☐ Email
   
☒ FTP
   
☐ HTTP
   
☐ Network storage

Server address:

Server port:

User name:

Password:

FTP folder name:

☒ Passive mode

Test

Close

Save server

- Server name: Enter a name for the server setting.
- Server address: Enter the domain name or IP address of the FTP server.
- Server port: By default, the FTP server port is set to 21. It can also be assigned to another port number between 1025 and 65535.
- User name: Enter the login name of the FTP account.
- Password: Enter the password of the FTP account.
- FTP folder name  
Enter the folder where the media file will be placed. If the folder name does not exist, the Network Camera will automatically create one on the FTP server.

#### ■ Passive mode

Most firewalls do not accept new connections initiated from external requests. If the FTP server supports passive mode, select this option to enable passive mode FTP and allow data transmission to pass through the firewall. The firmware default has the Passive mode checkbox selected.

To verify if the FTP settings are correctly configured, click **Test**. The result will be shown in a pop-up window as shown below. If successful, you will also receive a test.txt file on the FTP server.

Click **Save server** to enable the settings.

#### Server type - HTTP

Select to send the media files to an HTTP server when a trigger is activated.

- Server name: Enter a name for the server setting.
- URL: Enter the URL of the HTTP server.
- User name: Enter the user name if necessary.
- Password: Enter the password if necessary.

To verify if the HTTP settings are correctly configured, click **Test**. The result will be shown in a pop-up window as below. If successful, you will receive a test.txt file on the HTTP server.

Click **Save server** to enable the settings.

**Network storage:**

Select to send the media files to a network storage location when a trigger is activated. Please refer to **NAS server** on page 102 for details.

Click **Save server** to enable the settings.

**Action**

☐ Backup media if the network is disconnected

Note: Please configure [Preset locations](#) first

Server	Media	Extra parameter
<input type="checkbox"/> SD	----None----	<a href="#">SD test</a> <a href="#">View</a>
<input type="checkbox"/> Email	----None----	
<input type="checkbox"/> FTP	----None----	
<input type="checkbox"/> HTTP	----None----	
<input type="checkbox"/> NAS	----None----	<input type="checkbox"/> Create folders by date time and hour automatically <a href="#">View</a>

[Add server](#) [Add media](#)

[Close](#) [Save event](#)

- **SD Test:** Click to test your SD card. The system will display a message indicating success or failure. If you want to use your SD card for local storage, please format it before use. Please refer to page 90 for detailed information.
- **View:** Click this button to open a file list window. This function is only for SD card and Network Storage. If you click the View button of SD card, a Local storage page will pop up for you to manage recorded files on SD card. For more information about Local storage, please refer to page 104. If you click the View button of Network storage, a file directory window will prompt for you to view recorded data on Network storage. For detailed illustration, please refer to the next page.
- **Create folders by date, time, and hour automatically:** If you check this item, the system will generate folders automatically by the date when video footages are stored onto the networked storage.

The following is an example of a file destination with video clips:

<input type="checkbox"/>	<a href="#">20100820</a>	The format is: YYYYMMDD Click to open the directory
<input type="checkbox"/>	<a href="#">20100821</a>	
<input type="checkbox"/>	<a href="#">20100822</a>	
<a href="#">Delete</a> <a href="#">Delete all</a>		Click to delete all recorded data

Click to delete selected items

Click [20110220](#) to open the directory:

**The format is: HH (24r)**

Click to open the file list for that hour

< 07 08 09 10 11 12 13 14 15 16 17 >

	file name	size	date	time
<input type="checkbox"/>	<a href="#">Recording1 58.mp4</a>	2526004	2011/02/20	07:58:28
<input type="checkbox"/>	<a href="#">Recording1 59.mp4</a>	2563536	2011/02/20	07:59:28

Click to delete  
selected items

Click to go back to the previous  
level of the directory

Click to delete all  
recorded data

< 07 08 09 10 11 12 13 14 15 16 17 >

	file name	size	date	time
<input type="checkbox"/>	<a href="#">Recording1 58.mp4</a>	2526004	2011/02/20	07:58:28
<input type="checkbox"/>	<a href="#">Recording1 59.mp4</a>	2563536	2011/02/20	07:59:28

**The format is: File name prefix + Minute (mm)**

You can set up the file name prefix on the Add media page.  
Please refer to next page for detailed information.

## Add media

Click **Add media** to open the media setting window. You can specify the type of media that will be sent when a trigger is activated. A total of 5 media settings can be configured. There are three choices of media types available: Snapshot, Video Clip, and System log. Select the item to display the detailed configuration options. You can configure one or all of them.

### Media type - Snapshot

Select to send snapshots when a trigger is activated.

- Media name: Enter a name for the media setting.
- Source: Select to take snapshots from any of the video streams.
- Send ☐ pre-event images  
The Network Camera has a buffer area; it temporarily holds data up to a certain limit. Enter a number to decide how many images to capture before a trigger is activated. Up to 7 images can be generated.
- Send ☐ post-event images  
Enter a number to decide how many images to capture after a trigger is activated. Up to 7 images can be generated.

For example, if both the Send pre-event images and Send post-event images are set to 7, a total of 15 images are generated after a trigger is activated.

- File name prefix  
Enter the text that will be appended to the front of the file name.

- Add date and time suffix to the file name  
Select this option to add a date/time suffix to the file name.  
For example:

Click **Save media** to enable the settings.

To note that after you set up the first media server, a new column for media server will automatically show up on the Media list. If you wish to add more other media options, click **Add media**.

#### Media type - Video clip

Select to send video clips when a trigger is activated.

- Media name: Enter a name for the media setting.
- Source: Select the source of video clip.
- Pre-event recording  
The Network Camera has a buffer area; it temporarily holds data up to a certain limit. Enter a number to decide the duration of recording before a trigger is activated. Up to 9 seconds can be set.
- Maximum duration  
Specify the maximum recording duration in seconds. Up to 10 seconds can be set.  
For example, if pre-event recording is set to five seconds and the maximum duration is set to ten seconds, the Network Camera continues to record for another 4 seconds after a trigger is activated.

- **Maximum file size**  
Specify the maximum file size allowed.
- **File name prefix**  
Enter the text that will be appended to the front of the file name.  
For example:

Click **Save media** to enable the settings.

#### Media type - System log

Select to send a system log when a trigger is activated.

Media name:

**Media Type**

Attached media:

☐ Snapshot

☐ Video Clip

☒ System log

Click **Save media** to enable the settings, then click **Close** to exit the page.

**Action**

☐ Trigger digital output for  seconds

☐ Backup media if the network is disconnected

Server	Media	Extra parameter
<input type="checkbox"/> SD	-----None-----	<a href="#">SD test</a> <a href="#">View</a>

[Add server](#) [Add media](#)

In the Event settings column, the Servers and Medias you configured will be listed; please make sure the Event -> Status is indicated as **ON**, in order to enable the event triggering action.

When completed, click **Save event** to enable the settings and click **Close** to exit Event Settings page. The new Event / Server settings / Media will appear in the event drop-down list on the Event setting page.

Please see the example of the Event setting page below:

**Event**

Name	Status	Sun	Mon	Tue	Wed	Thu	Fri	Sat	Time	Trigger	
<a href="#">event1</a>	<a href="#">ON</a>	V	V	V	V	V	V	V	00:00~24:00	seq	<input type="button" value="Delete"/>

[Help](#)

**Server settings**

Name	Type	Address/Location	
<a href="#">HTTP</a>	http	http://192.168.5.10	<input type="button" value="Delete"/>

**Media**

Available memory space: 13000KB

Name	Type	
<a href="#">Snapshot</a>	snapshot	<input type="button" value="Delete"/>
<a href="#">Video clip</a>	videoclip	<input type="button" value="Delete"/>
<a href="#">System log</a>	systemlog	<input type="button" value="Delete"/>

**Customized script**

Name	Date	Time
------	------	------

When the Event Status is [ON](#), once an event is triggered; for example, by motion detection, the Network Camera will automatically send snapshots via e-mail.

If you want to stop the event trigger, you can click [ON](#) to turn it to [OFF](#) status or click **Delete** to remove the event setting.

To remove a server setting from the list, select a server name from the drop-down list and click **Delete**. Note that you can only delete a server setting when it is not applied to an event setting.

To remove a media setting from the list, select a media name from the drop-down list and click **Delete**. Note that you can only delete a media setting when it is not applied to an event setting.

## Customized Script

This function allows you to upload a sample script (.xml file) to the webpage, which will save your time on configuring the settings. Please note that there is a limited number of customized scripts you can upload; if the current amount of customized scripts has reached the limit, an alert message will prompt. If you need more information, please contact VIVOTEK technical support.

**Customized Script**

## Applications > Motion detection

This section explains how to configure the Network Camera to enable motion detection. A total of three motion detection windows can be configured.

Motion Detection Setting 1:  
For normal situations

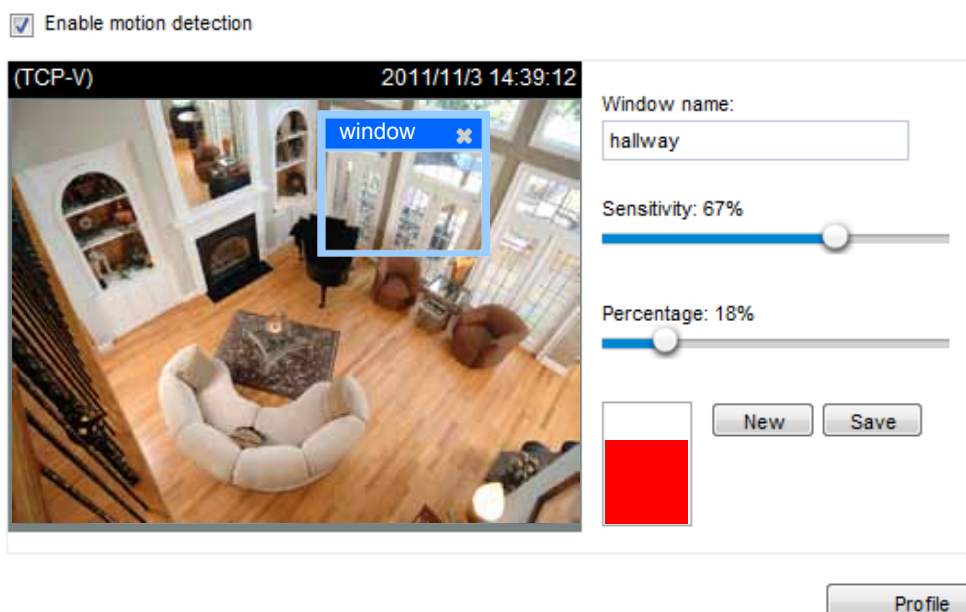

Motion Detection Setting 2:  
For special situations

Follow the steps below to enable motion detection:

1. Click **New** to add a new motion detection window.
2. In the Window Name text box, enter a name for the motion detection window.
  - To move and resize the window, drag and drop your mouse on the window.
  - To delete a window, click X on the upper right corner of the window.
3. Define the sensitivity to moving objects and the space ratio of all alerted pixels by moving the Sensitivity and Percentage slider bar.
4. Click **Save** to enable the settings.
5. Select **Enable motion detection** to enable this function.

For example:

The Percentage Indicator will rise or fall depending on the variation between sequential images. When motions are detected by the Network Camera and are judged to exceed the defined threshold, the red bar rises. Meanwhile, the motion detection window will be outlined in red. Photos or videos can be captured instantly and configured to be sent to a remote server (Email, FTP) by utilizing this feature as a trigger source. For more information on how to set an event, please refer to Event settings on page 82.

A green bar indicates that even though motions have been detected, the event has not been triggered because the image variations still fall under the defined threshold.

If you want to configure a motion detection setting for a different scenario, please click **Profile** to open the Motion Detection Profile Settings page as shown below. A total of three motion detection windows can also be configured on this page.

#### Motion detection profile settings

(TCP-V) 2012/6/13 05:27:10

Window name:   
Sensitivity: 57%  
Percentage: 21%

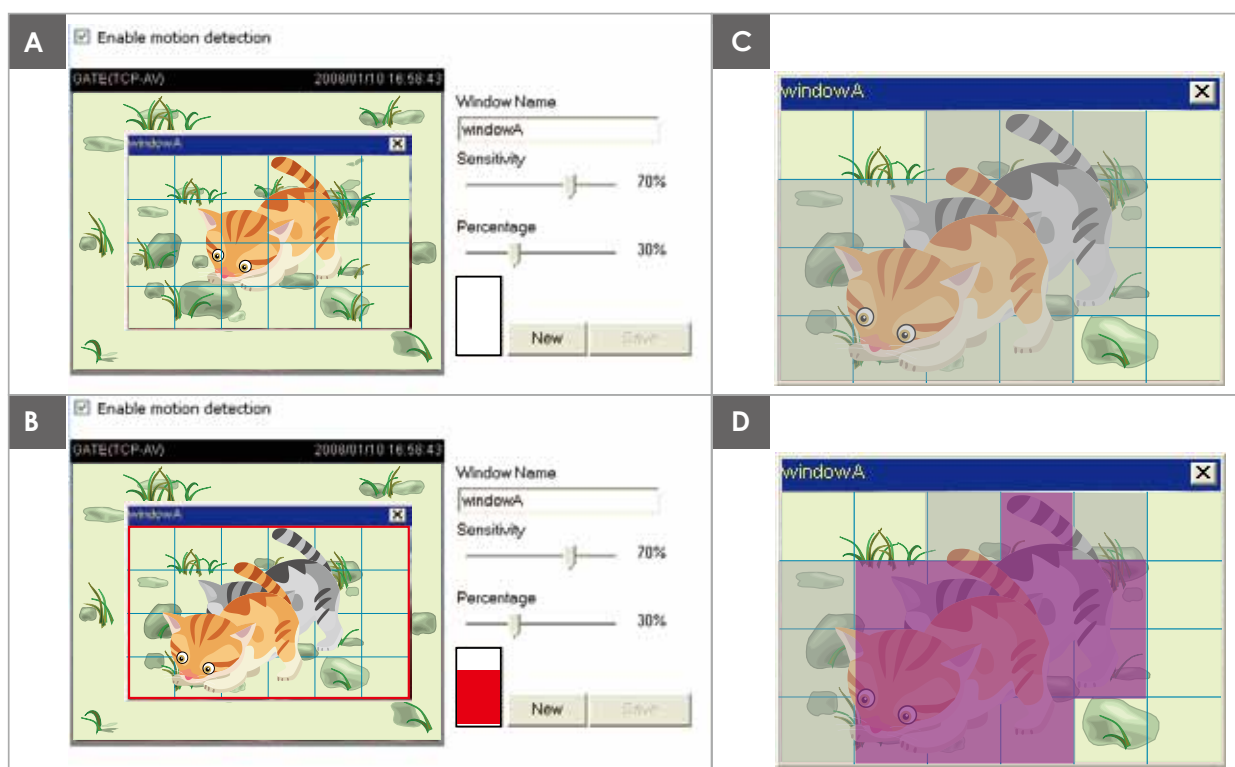

#### General settings

☒ Enable this profile  
This profile is applied to:  
Schedule mode:  
From  to  [hh:mm]

Please follow the steps below to set up a profile:

1. Create a new motion detection window.
2. Check **Enable this profile**.
3. Select the applicable schedule for the current setting. Please manually enter a range of time during which the configuration will take effect.
4. Click **Save** to enable the settings and click **Close** to exit the page.

This motion detection window will also be displayed on the Event Settings page. You can go to Event > Event settings > Trigger to choose Motion Detection as a trigger source. Please refer to page 100 for detailed information.

**NOTE:**► *How does motion detection work?*

There are two motion detection parameters: *Sensitivity* and *Percentage*. In the illustration above, frame A and frame B are two sequential images. Pixel differences between the two frames are detected and highlighted in gray (frame C) and will be compared with the sensitivity setting. Sensitivity is a value that expresses the sensitivity to moving objects. Higher sensitivity settings are expected to detect slight movements while smaller sensitivity settings will neglect them. When the sensitivity is set to 70%, the Network Camera defines the pixels in the purple areas as “alerted pixels” (frame D).

*Percentage* is a value that expresses the proportion of “alerted pixels” to all pixels in the motion detection window. In this case, 50% of pixels are identified as “alerted pixels”. When the percentage is set to 30%, the motions are judged to exceed the defined threshold; therefore, the motion window will be outlined in red.

For applications that require a high level of security management, it is suggested to use higher sensitivity settings and smaller percentage values.

## Applications > DI and DO Advanced Mode

Connect a Digital Input device to the camera's terminal block, the camera will automatically detect the current connection state as pulled-high or pulled-low. You may then define the triggering condition.

Digital input: Select High or Low to define the "Normal status" for the digital input. The Network Camera will report the current status.

## Applications > Tampering detection

This section explains how to set up camera tamper detection. With tamper detection, the camera is capable of detecting incidents such as **redirection**, **blocking or defocusing**, or even **spray paint**.

Please follow the steps below to set up the camera tamper detection function:

1. Check **Enable camera tampering detection**.
2. Enter the tamper trigger duration. (10 sec. ~ 10 min.) The tamper alarm will be triggered only when the tampering factor (the difference between current frame and pre-saved background) exceeds the trigger threshold.
3. Set up the event source as Camera Tampering Detection on **Event > Event settings > Trigger**. Please refer to page 100 for detailed information.

## Recording > Recording settings Advanced Mode

This section explains how to configure the recording settings for the Network Camera.

### Recording Settings

Insert your SD card and click [here](#) to test

**Recording settings**

Name	Status	Sun	Mon	Tue	Wed	Thu	Fri	Sat	Time	Source	Destination	Delete
<div> <input type="button" value="Add"/> <a href="#">SD test</a> </div>												

Note: Before setup recording, you may setup network storage via [NAS server](#) page

#### **NOTE:**

- Please remember to format your SD card when using it for the first time. Please refer to page 104 for detailed information.

### Recording Settings

Click **Add** to open the recording setting window. On this page, you can define the adaptive recording, recording source, recording schedule, and recording capacity. A total of 2 recording settings can be configured.

Recording name:

☒ Enable this recording

☒ With adaptive recording

Pre-event recording:  seconds [0~9]

Post-event recording:  seconds [0~10]

Priority:

Source:

**1. Trigger**

**2. Destination**

**Trigger**

☒ Schedule

☒ Sun ☒ Mon ☒ Tue ☒ Wed ☒ Thu ☒ Fri ☒ Sat

**Time**

☒ Always

☐ From  to  [hh:mm]

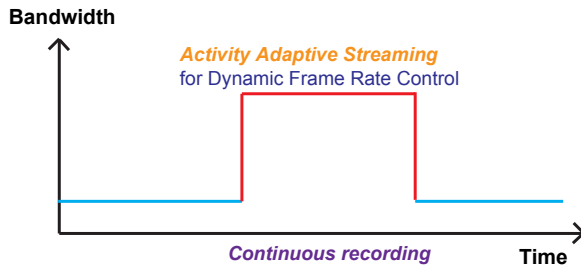

☐ Network fail

Note: To enable recording notification please configure [Event](#) first

- Recording name: Enter a name for the recording setting.
- Enable this recording: Select this option to enable video recording.
- With adaptive recording:  
Select this option will activate the frame rate control according to alarm trigger. The frame control means that when there is a triggered alarm, the frame rate will raise up to the value you've set on Video quality page. Please refer to page 49 for more information.

If you enable adaptive recording and enable time-shift cache stream on Camera A, only when an event is triggered on Camera A will the server record the full frame rate streaming data; otherwise, it will only request the I frame data during normal monitoring, thus effectively save lots of bandwidths and storage space.

#### **NOTE:**

- ▶ To enable adaptive recording, please make sure you've set up the trigger source such as Motion Detection, DI Device, or Manual Trigger.
- ▶ When there is no alarm trigger:
  - JPEG mode: record 1 frame per second.
  - H.264 mode: record 1 frame only.
  - MPEG-4 mode: record the I frame only.
- ▶ When the I frame period is >1s on Video settings page, firmware will force decrease the I frame period to 1s when adaptive recording is enabled.

The alarm trigger includes: motion detection and DI detection. Please refer to Event Settings on page 82.

#### ■ Pre-event recording and post-event recording

The Network Camera has a buffer; it temporarily holds data up to a certain limit. Enter a number to decide the duration of recording before and after a trigger is activated.

- Priority: Select the relative importance of this recording (High, Normal, or Low). Recording with a higher priority setting will be executed first.
- Source: Select a stream as the recording source.

#### **NOTE:**

- ▶ To enable recording notification please configure **Event settings** first. Please refer to page 82.

Please follow the steps below to set up a recording setting.

#### 1. Trigger

Select a trigger source.

Trigger

☒ Schedule

☒ Sun
☒ Mon
☒ Tue
☒ Wed
☒ Thu
☒ Fri
☒ Sat

Time

☒ Always

☐ From 00:00 to 24:00 [hh:mm]

☐ Network fail

- Schedule: The server will start to record files on the local storage or network storage (NAS).
- Network fail: In the event of a network failure, the server will start to record media files on the local storage (SD card).

## 2. Destination

You can select the SD card or network storage (NAS) for the recorded video files. If you have not configured a NAS server, see details in the following.

Priority: Normal   
 Source: Stream 1

1. Trigger

↓

2. Destination

**Destination**

Destination: NAS

Capacity:

☒ Entire free space

☐ Reserved space: 100 Mbytes

☐ Enable cyclic recording

**Recording file management**

Maximum duration: 1 minutes [1~30]

Maximum file size: 100 MB [100~900]

File name prefix:

Note: To enable recording notification please configure [Event](#) first

## NAS server

Click **Add NAS server** (if you have not configured a NAS server yet) to open the server setting window and follow the steps below to set up:

1. Fill in the information for your server.

For example:

1. Trigger

↓

2. Destination

Destination: SD

**Add NAS server**

Server name: NAS  3

Server type

☒ Network storage

Network storage location: \\192.168.5.12\NAS 1

(For example: \\my\_nas\disk\folder)

Workgroup: vivotek

User name: ritiali 2

Password: ..... 4

Network storage path  
(\\server name or IP address\folder name)

User name and password for your server

2. Click **Test** to check the setting. The result will be shown in the pop-up window.

If successful, you will receive a test.txt file on the network storage server.

3. Enter a server name.
4. Click **Save** to complete the settings and click **Close** to exit the page.

- **Capacity:** You can choose either the entire free space available or limit the reserved space. The recording size limit must be larger than the reserved amount for cyclic recording.
- **File name prefix:** Enter the text that will be appended to the front of the file name.
- **Enable cyclic recording:** If you check this item, when the maximum capacity is reached, the oldest file will be overwritten by the latest one. The reserved amount is reserved for the transaction stage when the storage space is about to be full and new data arrives. The minimum for the Reserved space must be larger than 15 MBytes.
- **Recording file management:** You can manually assign the Maximum duration and the Maximum file size for each recording footage. You may need to stitch individual files together under some circumstances, such as retrieving evidences. You may also designate a file name prefix by filling in the responsive text field.

If you want to enable recording notification, please click [Event](#) to configure event triggering settings. Please refer to **Event > Event settings** on page 82 for more details.

When completed, select **Enable this recording**. Click **Save** to enable the setting and click **Close** to exit this page. When the system begins recording, it will send the recorded files to the network storage. The new recording name will appear in the drop-down list on the recording page as shown below.

To remove a recording setting from the list, select a recording name from the drop-down list and click **Delete**.

**Recording Settings**

Note: Before setup recording, you have to setup network storage first via [Server](#) page

Name	Status	Sun	Mon	Tue	Wed	Thu	Fri	Sat	Time	Source	Destination
<a href="#">Video</a>	<a href="#">ON</a>	V	V	V	V	V	V	V	00:00~24:00	stream1	<a href="#">NAS</a>

Add
SD Test
Video ▼
Delete

- Click [Video](#) (Name): Opens the Recording Settings page to modify.
- Click [ON](#) (Status): The Status will become [OFF](#) and stop recording.
- Click [NAS](#) (Destination): Opens the file list of recordings as shown below. For more information about folder naming rules, please refer to page 88 for details.

☐ [20101210](#)

☐ [20101211](#)

☐ [20101212](#)

Delete
Delete all

## Local storage > SD card management Advanced Mode

This section explains how to manage the local storage on the Network Camera. Here you can view SD card status, and implement SD card control.

### SD card status

This column shows the status and reserved space of your SD card. Please remember to format the SD card when using for the first time.

**SD card status**

SD card status: Detached — no SD card

Total size: 0 KBytes Free size: 0 KBytes

Used size: 0 KBytes Use (%): 0 %

[Format](#)

**SD card status**

SD card status: Ready

Total size:	7810152 KBytes	Free size:	7602048 KBytes
Used size:	208104 KBytes	Use (%):	2.665 %

[Format](#)

### SD card control

**SD card control**

☐ Enable cyclic storage

☐ Enable automatic disk cleanup

Maximum duration for keeping files:  days

[Save](#)

- **Enable cyclic storage:** Check this item if you want to enable cyclic recording. When the maximum capacity is reached, the oldest file will be overwritten by the latest one.
- **Enable automatic disk cleanup:** Check this item and enter the number of days you wish to retain a file. For example, if you enter “7 days”, the recorded files will be stored on the SD card for 7 days.

Click **Save** to enable your settings.

## Local storage > Content management Advanced Mode

This section explains how to manage the content of recorded videos on the Network Camera. Here you can search and view the records and view the searched results.

### Searching and Viewing the Records

This column allows the user to set up search criteria for recorded data. If you do not select any criteria and click **Search** button, all recorded data will be listed in the **Search Results** column.

**Searching and viewing the records**

**File attributes**

Trigger type: ☐ System boot ☐ Recording notify ☐ Motion  
☐ Digital input ☐ Network fail ☐ Periodically  
☐ Manual triggers ☐ Tampering detection

Media type: ☐ Video clip ☐ Snapshot ☐ Text

Locked: ☐ Locked ☐ Unlocked

Backup: ☐ Backup

**Trigger time**

From: Date  Time   
to: Date  Time   
(yyyy-mm-dd) (hh:mm:ss)

- File attributes: Select one or more items as your search criteria.
- Trigger time: Manually enter the time range you want to search.

Click **Search** and the recorded data corresponding to the search criteria will be listed in **Search Results** window.

## Search Results

The following is an example of search results. There are four columns: Trigger time, Media type, Trigger type, and Locked. Click  to sort the search results in either direction.

Numbers of entries displayed on one page

Enter a key word to filter the search results

Search results

Show 10 entries

Search:

	Trigger time 	Media Type 	Trigger type 	Locked 	Backup 
<input checked="" type="checkbox"/>	2010-08-26 10:42:55	Video Clip	Periodically	No	No
<input type="checkbox"/>	2010-08-26 10:43:56	Video Clip	Periodically	No	No
<input type="checkbox"/>	2010-08-26 10:44:56	Video Clip	Periodically	No	No
<input type="checkbox"/>	2010-08-26 10:45:57	Video Clip	Periodically	No	No
<input type="checkbox"/>	2010-08-26 10:46:58	Video Clip	Periodically	No	No
<input type="checkbox"/>	2010-08-26 10:47:59	Video Clip	Periodically	No	No

- **View:** Click on a search result which will highlight the selected item in purple as shown above. Click the **View** button and a media window will pop up to play back the selected video clip. For example:

Click to adjust the image size

- **Download:** Click on a search result to highlight the selected item in purple as shown above. Then click the **Download** button and a file download window will pop up for you to save the file.
- **JPEGs to AVI:** This functions only applies to "JPEG" format files such as snapshots. You can select several snapshots from the list, then click this button. Those snapshots will be converted into an AVI file.

- **Lock/Unlock:** Select the desired search results, then click this button. The selected items will become Locked, which will not be deleted during cyclic recording. You can click again to unlock the selections. For example:

**Search results**

Show  entries Search:

	Trigger time	Media Type	Trigger type	Locked	Backup
<input checked="" type="checkbox"/>	2010-08-26 10:42:55	Video Clip	Periodically	Yes	No
<input checked="" type="checkbox"/>	2010-08-26 10:43:56	Video Clip	Periodically	Yes	No
<input checked="" type="checkbox"/>	2010-08-26 10:44:56	Video Clip	Periodically	Yes	No
<input type="checkbox"/>	2010-08-26 10:45:57	Video Clip	Periodically	No	No

Note: "View" and "Download" only apply to the highlight item

Click to switch  
pages

- **Remove:** Select the desired search results, then click this button to delete the files.

# Appendix

## URL Commands for the Network Camera

### 1. Overview

For some customers who already have their own web site or web control application, the Network Camera/Video Server can be easily integrated through URL syntax. This section specifies the external HTTP-based application programming interface. The HTTP-based camera interface provides the functionality to request a single image, control camera functions (PTZ, output relay etc.), and get and set internal parameter values. The image and CGI-requests are handled by the built-in Web server.

### 2. Style Convention

In URL syntax and in descriptions of CGI parameters, text within angle brackets denotes content that is to be replaced with either a value or a string. When replacing the text string, the angle brackets should also be replaced. An example of this is the description of the name for the server, denoted with <servername> in the URL syntax description below, that is replaced with the string myserver in the URL syntax example further down in the page.

URL syntax is denoted with the word "Syntax:" written in bold face followed by a box with the referenced syntax as shown below. For example, name of the server is written as <servername> and is intended to be replaced with the name of the actual server. This can either be a name, e.g., "mywebcam" or "thecam.adomain.net" or the associated IP number for the server, e.g., 192.168.0.220.

**Syntax:**

```
http://<servername>/cgi-bin/viewer/video.jpg
```

Description of returned data is written with "**Return:**" in bold face followed by the returned data in a box. All data is returned in HTTP format, i.e., each line is separated with a Carriage Return and Line Feed (CRLF) printed as \r\n.

**Return:**

```
HTTP/1.0 <HTTP code> <HTTP text>\r\n
```

URL syntax examples are written with "**Example:**" in bold face followed by a short description and a light grey box with the example.

**Example:** request a single snapshot image

```
http://mywebserver/cgi-bin/viewer/video.jpg
```

### 3. General CGI URL Syntax and Parameters

When the CGI request includes internal camera parameters, these parameters must be written exactly as they are named in the camera or video server. The CGIs are organized in functionally-related directories under the cgi-bin directory. The file extension .cgi is required.

Syntax:

```
http://<servername>/cgi-bin/<subdir>[/<subdir>...]/<cgi>.<ext>  
[?<parameter>=<value>[&<parameter>=<value>...]]
```

**Example:** Set digital output #1 to active

```
http://mywebserver/cgi-bin/dido/setdo.cgi?do1=1
```

## 4. Security Level

SECURITY LEVEL	SUB-DIRECTORY	DESCRIPTION
0	anonymous	Unprotected.
1 [view]	anonymous, viewer, dido, camctrl	1. Can view, listen, talk to camera. 2. Can control DI/DO, PTZ of the camera.
4 [operator]	anonymous, viewer, dido, camctrl, operator	Operator access rights can modify most of the camera's parameters except some privileges and network options.
6 [admin]	anonymous, viewer, dido, camctrl, operator, admin	Administrator access rights can fully control the camera's operations.
7	N/A	Internal parameters. Unable to be changed by any external interfaces.

## 5. Get Server Parameter Values

**Note:** The access right depends on the URL directory.

**Method:** GET/POST

Syntax:

```
http://<servername>/cgi-bin/<anonymous>/getparam.cgi?[<parameter>]
[&<parameter>...]

http://<servername>/cgi-bin/<viewer>/getparam.cgi?[<parameter>]
[&<parameter>...]

http://<servername>/cgi-bin/<operator>/getparam.cgi?[<parameter>]
[&<parameter>...]

http://<servername>/cgi-bin/<admin>/getparam.cgi?[<parameter>]
[&<parameter>...]
```

Where the *<parameter>* should be *<group>[\_<name>]*. If you do not specify any parameters, all the parameters on the server will be returned. If you specify only *<group>*, the parameters of the related group will be returned.

When querying parameter values, the current parameter values are returned.

A successful control request returns parameter pairs as follows:

Return:

```
HTTP/1.0 200 OK\r\n
Content-Type: text/html\r\n
Context-Length: <length>\r\n
\r\n
<parameter pair>
```

where *<parameter pair>* is

*<parameter>=<value>\r\n*

*[<parameter pair>]*

*<length>* is the actual length of content.

**Example:** Request IP address and its response

Request:

```
http://192.168.0.123/cgi-bin/admin/getparam.cgi?network_ipaddress
```

Response:

HTTP/1.0 200 OK\r\n

Content-Type: text/html\r\n

Content-Length: 33\r\n

\r\n

network\_ipaddress=192.168.0.123\r\n

## 6. Set Server Parameter Values

**Note:** The access right depends on the URL directory.

**Method:** GET/POST

Syntax:

```
http://<servername>/cgi-bin/<anonymous>/setparam.cgi? <parameter>=<value>
[&<parameter>=<value>...][&return=<return page>]
```

```
http://<servername>/cgi-bin/<viewer>/setparam.cgi? <parameter>=<value>
[&<parameter>=<value>...][&return=<return page>]
```

```
http://<servername>/cgi-bin/<operator>/setparam.cgi? <parameter>=<value>
[&<parameter>=<value>...][&return=<return page>]
```

```
http://<servername>/cgi-bin/<admin>/setparam.cgi? <parameter>=<value>
[&<parameter>=<value>...][&return=<return page>]
```

PARAMETER	VALUE	DESCRIPTION
<b>&lt;group&gt;_&lt;name&gt;</b>	value to assigned	Assign <value> to the parameter <group>_<name>.
<b>return</b>	<return page>	<p>Redirect to the page &lt;return page&gt; after the parameter is assigned. The &lt;return page&gt; can be a full URL path or relative path according to the current path. If you omit this parameter, it will redirect to an empty page.</p> <p>(Note: The return page can be a general HTML file (.htm, .html). It cannot be a CGI command or have any extra parameters. This parameter must be placed at the end of the parameter list</p>

Return:

```
HTTP/1.0 200 OK\r\n
Content-Type: text/html\r\n
Context-Length: <length>\r\n
\r\n
<parameter pair>
```

where <parameter pair> is

```
<parameter>=<value>\r\n
[<parameter pair>]
```

Only the parameters that you set and are readable will be returned.

**Example:** Set the IP address of server to 192.168.0.123:

Request:

[http://myserver/cgi-bin/admin/setparam.cgi?network\\_ipaddress=192.168.0.123](http://myserver/cgi-bin/admin/setparam.cgi?network_ipaddress=192.168.0.123)

Response:

HTTP/1.0 200 OK\r\n

Content-Type: text/html\r\n

Content-Length: 33\r\n

\r\n

network\_ipaddress=192.168.0.123\r\n

## 7. Available parameters on the server

This chapter defines all the parameters which can be configured or retrieved from VIVOTEK network camera or video server. The general format of description is listed in the table below

Valid values:

VALID VALUES	DESCRIPTION
string[<n>]	Text strings shorter than 'n' characters. The characters ",', <, >, & are invalid.
string[n~m]	Text strings longer than 'n' characters and shorter than 'm' characters. The characters ",', <, >, & are invalid.
password[<n>]	The same as string but displays '*' instead.
integer	Any number between $(-2^{31} - 1)$ and $(2^{31} - 1)$ .
positive integer	Any number between 0 and $(2^{32} - 1)$ .
<m> ~ <n>	Any number between 'm' and 'n'.
domain name[<n>]	A string limited to a domain name shorter than 'n' characters (eg. www.ibm.com).
email address [<n>]	A string limited to an email address shorter than 'n' characters (eg. joe@www.ibm.com).
ip address	A string limited to an IP address (eg. 192.168.1.1).
mac address	A string limited to contain a MAC address without hyphens or colons.
boolean	A boolean value of 1 or 0 represents [Yes or No], [True or False], [Enable or Disable].
<value1>, <value2>, <value3>, ...	Enumeration. Only given values are valid.
blank	A blank string.
everything inside <>	A description
integer primary key	SQLite data type. A 32-bit signed integer. The value is assigned a unique integer by the server.
text	SQLite data type. The value is a text string, stored using the database encoding (UTF-8, UTF-16BE or UTF-16-LE).
coordinate	x, y coordinate (eg. 0,0)
window size	window width and height (eg. 800x600)

NOTE: The camera should not be restarted when parameters are changed.

## 7.1 system

Group: **system**

NAME	VALUE	DEFAULT	SECURITY (get/set)	DESCRIPTION
hostname	string[40]	Mega-Pixel Network Camera	1/6	Host name of server (Network Camera, Wireless Network Camera, Video Server, Wireless Video Server).
date	<yyyy/mm/dd>, keep, auto	<current date>	6/6	Current date of system. Set to 'keep' to keep date unchanged. Set to 'auto' to use NTP to synchronize date.
time	<hh:mm:ss>, keep, auto	<current time>	6/6	Current time of the system. Set to 'keep' to keep time unchanged. Set to 'auto' to use NTP to synchronize time.
datetime	<MMDDhhmmYYY Y.ss>	<current time>	6/6	Another current time format of the system.
ntp	<domain name>, <ip address>, <blank>	<blank>	6/6	NTP server. *Do not use "skip to invoke default server" for default value.
timezoneindex	-489 ~ 529	320	6/6	Indicate timezone and area. -480: GMT-12:00 Eniwetok, Kwajalein -440: GMT-11:00 Midway Island, Samoa -400: GMT-10:00 Hawaii -360: GMT-09:00 Alaska -320: GMT-08:00 Las Vegas, San_Francisco,

daylight_enable	<boolean>	0	6/6	Enable <b>automatic</b> daylight saving time in time zone.
daylight_dstactualmode	<boolean>	0	6/7	Check if current time is under daylight saving time. (Used internally)
daylight_auto_begintime	string[19]	NONE	6/7	Display the current daylight saving start time. (product dependent)
daylight_auto_endtime	string[19]	NONE	6/7	Display the current daylight saving end time. (product dependent)
daylight_manual_offset	<integer>	60	6/6	Manually set daylight saving time with offset.
daylight_manual_begintime	string[19]	<blank>	6/6	Manually set daylight saving time beginning.
daylight_manual_endtime	string[19]	<blank>	6/6	Manually set daylight saving time end.
daylight_timezones	string	, -360, -320, -280 , -240, -241, -200	6/6	List time zone index which support daylight saving time.

		, -201, -160, -140, -120, -80, -40, 0, 40, 41, 80, 81, 82, 83, 120, 140, 380, 400, 480		
updateinterval	0, 3600, 86400, 604800, 2592000	0	6/6	0 to Disable automatic time adjustment, otherwise, it indicates the seconds between NTP automatic update intervals.
restore	0, <positive integer>	N/A	7/6	Restore the system parameters to default values after <value> seconds.
reset	0, <positive integer>	N/A	7/6	Restart the server after <value> seconds if <value> is non-negative.
restoreexceptnet	<Any value>	N/A	7/6	Restore the system parameters to default values except (ipaddress, subnet, router, dns1, dns2, pppoe).  This command can cooperate with other "restoreexceptXYZ" commands. When cooperating with others, the system parameters will be restored to the default value except for a union of the combined

				results.
restoreexceptdst	<Any value>	N/A	7/6	<p>Restore the system parameters to default values except all daylight saving time settings.</p> <p>This command can cooperate with other "restoreexceptXYZ" commands. When cooperating with others, the system parameters will be restored to default values except for a union of combined results.</p>
restoreexceptlang	<Any Value>	N/A	7/6	<p>Restore the system parameters to default values except the custom language file the user has uploaded.</p> <p>This command can cooperate with other "restoreexceptXYZ" commands. When cooperating with others, the system parameters will be restored to the default value except for a union of the combined results.</p>

## 7.1.1 system.info

Subgroup of **system: info** (The fields in this group are unchangeable.)

NAME	VALUE	DEFAULT	SECURITY (get/set)	DESCRIPTION
modelname	string[40]	IP8332	0/7	Internal model name of the server (eg. IP7139)
extendedmodelname	string[40]	IP8332	0/7	ODM specific model name of server (eg. DCS-5610). If it is not an ODM model, this field will be equal to "modelname"
serialnumber	<mac address>	<product mac address>	0/7	12 characters MAC address (without hyphens).
firmwareversion	string[40]	<firmware version>	0/7	Firmware version, including model, company, and version number in the format: <MODEL-BRAND-VERSION>
language_count	<integer>	9	0/7	Number of webpage languages available on the server.
language_i<0~(count-1)>	string[16]	English Deutsch Espanol Francais Italiano 日本語 Portugues 簡體中文 繁體中文	0/7	Available language lists.
customlanguage_maxcount	<integer>	1	0/6	Maximum number of custom languages supported on the server.
customlanguage_count	<integer>	0	0/6	Number of custom languages which have been uploaded to the server.
customlanguage_i<0~(max	string	N/A	0/6	Custom language name.

count-1)>				
-----------	--	--	--	--

## 7.2 status

Group: **status**

NAME	VALUE	DEFAULT	SECURITY (get/set)	DESCRIPTION
di_i<0~(ndi-1)>	<boolean>	0	1/7	0 => Inactive, normal 1 => Active, triggered
onlinenum_rtsp	integer	0	6/7	Current number of RTSP connections.
onlinenum_httppush	integer	0	6/7	Current number of HTTP push server connections.
eth_i0	<string>	<blank>	1/99	Get network information from mii-tool.
vi_i<0~(nvi-1)> <product dependent>	<boolean>	0	1/7	Virtual input 0 => Inactive 1 => Active (capability.nvi > 0)

## 7.3 digital input behavior define

Group: **di\_i<0~(ndi-1)>** (capability.ndi > 0)

NAME	VALUE	DEFAULT	SECURITY (get/set)	DESCRIPTION
normalstate	high, low	high	1/1	Indicates open circuit or closed circuit (inactive status)

## 7.4 security

Group: **security**

NAME	VALUE	DEFAULT	SECURITY (get/set)	DESCRIPTION
privilege_camctrl	view, operator, admin	operator	6/6	Indicate which privileges and above can control PTZ (capability.ptzenabled > 0 or capability.eptz > 0)
user_i0_name	string[64]	root	6/7	User name of root
user_i<1~20>_name	string[64]	<blank>	6/7	User name
user_i0_pass	password[64]	<blank>	6/6	Root password
user_i<1~20>_pass	password[64]	<blank>	7/6	User password
user_i0_privilege	viewer, operator, admin	admin	6/7	Root privilege
user_i<1~20>_ privilege	viewer, operator, admin	<blank>	6/6	User privilege

## 7.5 network

Group: **network**

NAME	VALUE	DEFAULT	SECURITY (get/set)	DESCRIPTION
type	lan, pppoe	lan	6/6	Network connection type.
resetip	<boolean>	1	6/6	1 => Get ipaddress, subnet, router, dns1, dns2 from DHCP server at next reboot. 0 => Use preset ipaddress, subnet, router, dns1, and dns2.
ipaddress	<ip address>	<product dependent>	6/6	IP address of server.
subnet	<ip address>	<blank>	6/6	Subnet mask.
router	<ip address>	<blank>	6/6	Default gateway.
dns1	<ip address>	<blank>	6/6	Primary DNS server.

dns2	<ip address>	<blank>	6/6	Secondary DNS server.
wins1	<ip address>	<blank>	6/6	Primary WINS server.
wins2	<ip address>	<blank>	6/6	Secondary WINS server.

## 7.5.1 802.1x

Subgroup of **network: ieee8021x**

NAME	VALUE	DEFAULT	SECURITY (get/set)	DESCRIPTION
enable	<boolean>	0	6/6	Enable/disable IEEE 802.1x
eapmethod	eap-peap, eap-tls	eap-peap	6/6	Selected EAP method
identity_peap	String[64]	<blank>	6/6	PEAP identity
identity_tls	String[64]	<blank>	6/6	TLS identity
password	String[254]	<blank>	6/6	Password for TLS
privatekeypassword	String[254]	<blank>	6/6	Password for PEAP
ca_exist	<boolean>	0	6/6	CA installed flag
ca_time	<integer>	0	6/7	CA installed time. Represented in EPOCH
ca_size	<integer>	0	6/7	CA file size (in bytes)
certificate_exist	<boolean>	0	6/6	Certificate installed flag (for TLS)
certificate_time	<integer>	0	6/7	Certificate installed time. Represented in EPOCH
certificate_size	<integer>	0	6/7	Certificate file size (in bytes)
privatekey_exist	<boolean>	0	6/6	Private key installed flag (for TLS)
privatekey_time	<integer>	0	6/7	Private key installed time. Represented in EPOCH
privatekey_size	<integer>	0	6/7	Private key file size (in bytes)

## 7.5.2 QoS

Subgroup of **network: qos\_cos** (capability.protocol.qos.cos>0)

NAME	VALUE	DEFAULT	SECURITY (get/set)	DESCRIPTION
enable	<boolean>	0	6/6	Enable/disable CoS (IEEE 802.1p)
vlanid	1~4095	1	6/6	VLAN ID
video	0~7	0	6/6	Video channel for CoS
eventalarm	0~7	0	6/6	Event/alarm channel for CoS

management	0~7	0	6/6	Management channel for CoS
eventtunnel	0~7	0	6/6	Event/Control channel for CoS

Subgroup of **network: qos\_dscp** (capability.protocol.qos.dscp>0)

NAME	VALUE	DEFAULT	SECURITY (get/set)	DESCRIPTION
enable	<boolean>	0	6/6	Enable/disable DSCP
video	0~63	0	6/6	Video channel for DSCP
eventalarm	0~63	0	6/6	Event/alarm channel for DSCP
management	0~63	0	6/6	Management channel for DSCP
eventtunnel	0~63	0	6/6	Event/Control channel for DSCP

## 7.5.3 IPv6

Subgroup of **network: ipv6** (capability.protocol.ipv6>0)

NAME	VALUE	DEFAULT	SECURITY (get/set)	DESCRIPTION
enable	<boolean>	0	6/6	Enable IPv6.
addonipaddress	<ip address>	<blank>	6/6	IPv6 IP address.
addonprefixlen	0~128	64	6/6	IPv6 prefix length.
addonrouter	<ip address>	<blank>	6/6	IPv6 router address.
addondns	<ip address>	<blank>	6/6	IPv6 DNS address.
allowoptional	<boolean>	0	6/6	Allow manually setup of IP address setting.

## 7.5.4 FTP

Subgroup of **network: ftp**

NAME	VALUE	DEFAULT	SECURITY (get/set)	DESCRIPTION
Port	21, 1025~65535	21	6/6	Local ftp server port.

## 7.5.5 HTTP

Subgroup of **network**: **http**

NAME	VALUE	DEFAULT	SECURITY (get/set)	DESCRIPTION
port	80, 1025 ~ 65535	80	6/6	HTTP port.
alternateport	1025~65535	8080	6/6	Alternate HTTP port.
authmode	basic, digest	basic	1/6	HTTP authentication mode.
s0_accessname	string[32]	video.mjpg	1/6	HTTP server push access name for stream 1. (capability.protocol.spush_mjpeg =1 and video.stream.count>0)
s1_accessname	string[32]	video2.mjpg	1/6	HTTP server push access name for stream 2. (capability.protocol.spush_mjpeg =1 and video.stream.count>1)
s2_accessname	string[32]	Video3.mjpg	1/6	Http server push access name for stream 3 (capability.protocol.spush_mjpeg =1 and video.stream.count>2)
s3_accessname	string[32]	Video4.mjpg	1/6	Http server push access name for stream 4 (capability.protocol.spush_mjpeg =1 and video.stream.count>3)
s4_accessname	string[32]	Videoany.mjpg	1/6	Http server push access name for stream 5 (capability.protocol.spush_mjpeg =1 and video.stream.count>4) <b>IP8332 ONLY</b>
anonymousviewing	<boolean>	0	1/6	Enable anoymous streaming viewing.

## 7.5.6 HTTPS port

Subgroup of **network**: **https\_port**

NAME	VALUE	DEFAULT	SECURITY (get/set)	DESCRIPTION
port	443, 1025 ~ 65535	443	6/6	HTTPS port.

## 7.5.7 RTSP

Subgroup of **network**: **rtsp**

NAME	VALUE	DEFAULT	SECURITY (get/set)	DESCRIPTION
port	554, 1025 ~ 65535	554	1/6	RTSP port. (capability.protocol.rtsp=1)
anonymousviewing	<boolean>	0	1/6	Enable anonymous streaming viewing.
authmode	disable, basic, digest	disable	1/6	RTSP authentication mode. (capability.protocol.rtsp=1)
s0_accessname	string[32]	live.sdp	1/6	RTSP access name for stream1. (capability.protocol.rtsp=1 and video.stream.count>0)
s1_accessname	string[32]	live2.sdp	1/6	RTSP access name for stream2. (capability.protocol.rtsp=1 and video.stream.count>1)
s2_accessname	string[32]	live3.sdp	1/6	RTSP access name for stream3 (capability.protocol.rtsp=1 and video.stream.count>2)
s3_accessname	string[32]	live4.sdp	1/6	RTSP access name for stream4 (capability.protocol.rtsp=1 and video.stream.count>3)
S4_accessname	string[32]	liveany.sdp	1/6	RTSP access name for stream5 (capability.protocol.rtsp=1 and video.stream.count>4) <b>IP8332 ONLY</b>

### 7.5.7.1 RTSP multicast

Subgroup of **network\_rtsp\_s<0~(n-1)>**: **multicast**, n is stream count

(**capability.protocol.rtp.multicast=1**)

NAME	VALUE	DEFAULT	SECURITY (get/set)	DESCRIPTION
alwaysmulticast	<boolean>	0	4/4	Enable always multicast.
ipaddress	<ip address>	For n=0, 239.128.1.99 For n=1, 239.128.1.100, and so on.	4/4	Multicast IP address.
videoport	1025 ~ 65535	5560+n*2	4/4	Multicast video port.
tll	1 ~ 255	15	4/4	Multicast time to live value.

### 7.5.8 SIP port

Subgroup of **network**: **sip**

NAME	VALUE	DEFAULT	SECURITY (get/set)	DESCRIPTION
Port	1025 ~ 65535	5060	1/6	SIP port. ( <b>capability.protocol.sip=1</b> )

### 7.5.9 RTP port

Subgroup of **network**: **rtp**

NAME	VALUE	DEFAULT	SECURITY (get/set)	DESCRIPTION
videoport	1025 ~ 65535	5556	6/6	Video channel port for RTP. ( <b>capability.protocol.rtp_unicast=1</b> )

## 7.5.10 PPPoE

Subgroup of **network**: **pppoe**

NAME	VALUE	DEFAULT	SECURITY (get/set)	DESCRIPTION
user	string[128]	<blank>	6/6	PPPoE account user name.
pass	password[64]	<blank>	6/6	PPPoE account password.

## 7.6 IP Filter

Group: **ipfilter**

NAME	VALUE	DEFAULT	SECURITY (get/set)	DESCRIPTION
enable	<boolean>	0	6/6	Enable access list filtering.
admin_enable	<boolean>	0	6/6	Enable administrator IP address.
admin_ip	String[44]	<blank>	6/6	Administrator IP address.
maxconnection	1~10	10	6/6	Maximum number of concurrent streaming connection(s).
allow_i<0~9>_start	1.0.0.0 ~ 255.255.255.255	allow_0_start => 1.0.0.0  allow_<1~9>_start => <blank>	6/6	Allowed starting IPv4 address for connection.
allow_i<0~9>_end	1.0.0.0 ~ 255.255.255.255	allow_0_end => 255.255.255.255  allow_<1~9>_end => <blank>	6/6	Allowed ending IPv4 address for connection.
deny_i<0~9>_start	1.0.0.0 ~ 255.255.255.255	<blank>	6/6	Denied starting IPv4 address for connection.
deny_i<0~9>_end	1.0.0.0 ~	<blank>	6/6	Denied ending IPv4

	255.255.255.255			address for connection.
ipv6_allow_i<0~9>	String[44]	ipv6_allow_i0 => ::/0 ipv6_allow_i<1~9> => <blank>	6/6	Allowed IPv6 address for connection.
ipv6_deny_i<0~9>	String[44]	<blank>	6/6	Denied IPv6 address for connection.

## 7.7 video input

### 7.7.1 video input setting per channel

Group: **videoin\_c<0~(n-1)>** for n channel products, and m is stream number

NAME	VALUE	DEFAULT	SECURITY (get/set)	DESCRIPTION
cmosfreq	50, 60	60	4/4	CMOS frequency. (videoin.type=2) (product dependent)
whitebalance	auto, manual	auto	4/4	"auto" indicates auto white balance. "manual" indicates keep current value.
rgain	0~100	30	4/4	Manual set rgain value of gain control setting
bgain	0~100	30	4/4	Manual set bgain value of gain control setting
exposurelevel	0~12	6	4/4	Exposure level
enableblc	0~1	0	4/4	Enable backlight compensation.
agcmode	auto, fixed	auto	4/4	Set auto gain control mode.
maxgain	0~100	100	4/4	Manual set maximum gain value.
mingain	0~100	0	4/4	Manual set minimum gain value.
color	0, 1	1	4/4	0 => monochrome

				1 => color
flip	<boolean>	0	4/4	Flip the image.
mirror	<boolean>	0	4/4	Mirror the image.
ptzstatus	<integer>	2	1/7	<p>A 32-bit integer, each bit can be set separately as follows:</p> <p>Bit 0 =&gt; Support camera control function; 0(not support), 1(support)</p> <p>Bit 1 =&gt; <b>Built-in</b> or <b>external</b> camera; 0 (external), 1(built-in)</p> <p>Bit 2 =&gt; Support <b>pan</b> operation; 0(not support), 1(support)</p> <p>Bit 3 =&gt; Support <b>tilt</b> operation; 0(not support), 1(support)</p> <p>Bit 4 =&gt; Support <b>zoom</b> operation; 0(not support), 1(support)</p> <p>Bit 5 =&gt; Support <b>focus</b> operation; 0(not support), 1(support)</p>
text	string[16]	<blank>	1/4	Enclose caption.
imprinttimestamp	<boolean>	0	4/4	Overlay time stamp on video.
exposuremode	auto, fixed	auto	4/4	exposure mode
minexposure	1~32000	32000	4/4	minimum exposure time
maxexposure	1~32000	30	4/4	maximum exposure time
crop_position	<coordinate > (x,y)	(0,0)	1/4	Crop left-top corner coordinate.
crop_size	<window size> (WxH)	1280x80 0	1/4	Crop width and height (width must be 16x or 32x and height must be 8x)
s<0~(m-1)>_codectype	mpeg4, mjpeg,	H264	1/4	Video codec type.

	h264			
s<0~(m-1)>_resolution	1M CMOS 176x144, 320x200 640x400 1280x800	1M CMOS	1/4	Video resolution in pixels.
s<0~(m-1)>_mpeg4_intraframeperiod	250, 500, 1000, 2000, 3000, 4000	1000	4/4	Intra frame period in milliseconds.
s<0~(m-1)>_mpeg4_ratecontrol mode	cbr, vbr	vbr	4/4	cbr, constant bitrate vbr, fix quality
s<0~(m-1)>_mpeg4_quant	0, 1~5	3	4/4	Quality of video when choosing vbr in "ratecontrolmode". 0 is the customized manual input setting. 1 = worst quality, 5 = best quality.
s<0~(m-1)>_mpeg4_qvalue	2~31	7	4/4	Manual video quality level input.
s<0~(m-1)>_mpeg4_bitrate	1000~80000 00	51200	4/4	Set bit rate in bps when choosing cbr in "ratecontrolmode".
s<0~(m-1)>_mpeg4_maxframe	1~25, 26~30 (only for NTSC or 60Hz CMOS)	25=>PAL CCD or 50Hz CMOS 30 =>NTSC CCD or 60Hz CMOS	1/4	Set maximum frame rate in fps (for MPEG-4)
s<0~(m-1)>_h264_intraframeperiod	250, 500, 1000, 2000,	1000	4/4	Intra frame period in milliseconds.

	3000, 4000			
s<0~(m-1)>_h264_ratecontrolmode	cbr, vbr	vbr	4/4	cbr, constant bitrate vbr, fix quality
s<0~(m-1)>_h264_quant	1~5,99	3	4/4	Quality of video when choosing vbr in "ratecontrolmode". 0 is the customized manual input setting. 1 = worst quality, 5 = best quality.
s<0~(m-1)>_h264_qvalue	0~51	2	4/4	Manual video quality level input - choose customize input "h264_quant = 0" (for MPEG-4).
s<0~(m-1)>_h264_bitrate	1000~800000	2048000	4/4	Set bit rate in bps when choosing cbr in "ratecontrolmode".
s<0~(m-1)>_h264_maxframe	1~25, 26~30 (only for NTSC or 60Hz CMOS)	15	1/4	Set maximum frame rate in fps (for h264).
s<0~(m-1)>_h264_profile	0~2	1	1/4	Indicate H264 profiles 0: baseline 1: main profile 2: high profile
s<0~(m-1)>_mpeg_quant	0 ~ 5	3	4/4	Quality of JPEG video. 0 is the customized manual input setting. 1 = worst quality, 5 = best quality.
s<0~(m-1)>_mpeg_maxframe	1~25, 26~30 (only for NTSC or 60Hz CMOS)	25 => PAL CCD or 50Hz CMOS 30 => NTSC	1/4	Set maximum frame rate in fps (for JPEG).

		CCD or 60Hz CMOS		
s<0~(m-1)>_mjpeg_qvalue	2~97	50	4/4	Manual video quality level input - choose customize input "mjpeg_quant = 0" (for MJPEG).
s<0~(m-1)>_forcei	1	N/A	7/6	Force I frame.

### 7.8.1.1 Alternative video input profiles per channel

In addition to the primary setting of video input, there can be alternative profile video input setting for each channel which might be for different scene of light (daytime or nighttime).

Group: **videoin\_profile\_i<0~(m-1)>** (product dependent)

NAME	VALUE	DEFAULT	SECURITY (get/set)	DESCRIPTION
enable	<boolean>	0	4/4	Enable/disable this profile setting
policy	day, night, schedule	night	4/4	The mode which the profile is applied to.
begintime	hh:mm	18:00	4/4	Begin time of schedule mode.
endtime	hh:mm	06:00	4/4	End time of schedule mode.
exposurelevel	0~12	6	4/4	Exposure level
maxexposure	1~32000	32000	4/4	Maximum exposure time.
minexposure	1~32000	30	4/4	Minimum exposure time.
agc	0~2	1	4/4	Auto gain control
enableblc	<boolean>	0	4/4	Enable backlight compensation.

## 7.9 video input preview

The temporary settings for video preview

Group: **videoinputpreview**

NAME	VALUE	DEFAULT	SECURITY (get/set)	DESCRIPTION
enableblc	<boolean>	0	4/4	Preview of enable backlight compensation.
agc	0~2	1	4/4	Preview of set auto gain control to normal level or MAX level. 0->normal, 1->max
exposurelevel	0~12	6	4/4	Preview of exposure level
whitebalance	0~1	0	4/4	0: auto tracking white balance 1: white balance control
enableblc	0~1	0	4/4	Enable backlight compensation

## 7.10 image setting per channel

Group: **image\_c<0~(n-1)>** for n channel products

NAME	VALUE	DEFAULT	SECURITY (get/set)	DESCRIPTION
brightness	-5 ~ 5	-5	4/4	Adjust brightness of image according to mode settings.
contrast	-5 ~ 5	0	4/4	Adjust contrast of image according to mode settings.
saturationpercent	0~100	50	4/4	Adjust saturation of image by percentage. Less 0 <-> 100 More saturation
sharpnesspercent	0~100	50	4/4	Adjust sharpness of image by percentage. Softer 0 <-> 100 Sharper
mode	preview, restore,	N/A	7/4	Preview => Apply the parameters of image

	save			without saving. Restore => Restore the previous saved image parameters. Save => Directly save the adjust image parameters.
profile_i0_enable	<boolean>	0	4/4	Enable/disable this profile setting
profile_i0_policy	day, night, schedule	night	4/4	The mode which the profile is applied to.
profile_i0_begintime	hh:mm	18:00	4/4	Begin time of schedule mode.
profile_i0_endtime	hh:mm	06:00	4/4	End time of schedule mode.
profile_i0_brightness	-5~5	-5	4/4	Adjust brightness of image according to mode settings.
profile_i0_contrast	-5~5	0	4/4	Adjust contrast of image according to mode settings.
profile_i0_sharpnesspercent	0~100	50	4/4	Adjust sharpness value of percentage when sharpness=100

## 7.11 image setting for preview

Group: **imagepreview\_c<0~(n-1)>** for n channel products

NAME	VALUE	DEFAULT	SECURITY (get/set)	DESCRIPTION
brightness	-5 ~ 5	-5	4/4	Preview of brightness adjustment of image according to mode settings.
contrast	-5 ~ 5	0	4/4	Preview of contrast adjustment of image according to mode settings.

saturationpercent	0~100	50	4/4	Adjust saturation of image by percentage. Less 0 <-> 100 More contrast
sharpnesspercent	0~100	50	4/4	Adjust sharpness of image by percentage. Softer 0 <-> Sharper

Group: **imagepreview**

NAME	VALUE	DEFAULT	SECURITY (get/set)	DESCRIPTION
videoin_whitebalance	auto, manual	auto	4/4	Preview of adjusting white balance of image according to mode settings
videoin_restoreatwb	0, 1~	0	4/4	Restore of adjusting white balance of image according to mode settings
videoin_rgain	0~100	0	4/4	Manual set rgain value of gain control setting.
videoin_bgain	0~100	0	4/4	Manual set bgain value of gain control setting.

## 7.12 Time Shift settings

Group: **timeshift**, c for n channel products, m is stream number (product dependent)

NAME	VALUE	DEFAULT	SECURITY (get/set)	DESCRIPTION
enable	<boolean>	0	4/4	Enable time shift streaming.
c<0~(n-1)>_s<0~(m-1)>_allow	<boolean>	0	4/4	Enable time shift streaming for specific stream. (product dependent)

## 7.13 Motion detection settings

Group: **motion\_c<0~(n-1)>** for m profile and n channel product

NAME	VALUE	DEFAULT	SECURITY (get/set)	DESCRIPTION
enable	<boolean>	0	4/4	Enable motion detection.
win_i<0~2>_enable	<boolean>	0	4/4	Enable motion window 1~3.
win_i<0~2>_name	string[14]	<blank>	4/4	Name of motion window 1~3.
win_i<0~2>_left	0 ~ 320	0	4/4	Left coordinate of window position.
win_i<0~2>_top	0 ~ 240	0	4/4	Top coordinate of window position.
win_i<0~2>_width	0 ~ 320	0	4/4	Width of motion detection window.
win_i<0~2>_height	0 ~ 240	0	4/4	Height of motion detection window.
win_i<0~2>_objsize	0 ~ 100	0	4/4	Percent of motion detection window.
win_i<0~2>_sensitivity	0 ~ 100	0	4/4	Sensitivity of motion detection window.
profile_i<0~(m-1)>_enable	<boolean>	0	4/4	Enable profile 1 ~ (m-1).
profile_i<0~(m-1)>_policy	day, night, schedule	night	4/4	The mode which the profile is applied to.
profile_i<0~(m-1)>_begintime	hh:mm	18:00	4/4	Begin time of schedule

				mode.
profile_i<0~(m-1)>_endtime	hh:mm	06:00	4/4	End time of schedule mode.
profile_i<0~(m-1)>_win_i<0~2>_enable	<boolean>	0	4/4	Enable motion window.
profile_i<0~(m-1)>_win_i<0~2>_name	string[14]	<blank>	4/4	Name of motion window.
profile_i<0~(m-1)>_win_i<0~2>_left	0 ~ 320	0	4/4	Left coordinate of window position.
profile_i<0~(m-1)>_win_i<0~2>_top	0 ~ 240	0	4/4	Top coordinate of window position.
profile_i<0~(m-1)>_win_i<0~2>_width	0 ~ 320	0	4/4	Width of motion detection window.
profile_i<0~(m-1)>_win_i<0~2>_height	0 ~ 240	0	4/4	Height of motion detection window.
profile_i<0~(m-1)>_win_i<0~2>_objsize	0 ~ 100	0	4/4	Percent of motion detection window.
profile_i<0~(m-1)>_win_i<0~2>_sensitivity <product dependent>	0 ~ 100	0	4/4	Sensitivity of motion detection window.

## 7.14 Tampering detection settings

Group: **tampering\_c<0~(n-1)>** for n channel product (product dependent)

NAME	VALUE	DEFAULT	SECURITY (get/set)	DESCRIPTION
enable	<boolean>	0	4/4	Enable or disable tamper detection.
threshold	0 ~ 255	32	4/4	Threshold of tamper detection.
duration	10 ~ 600	10	4/4	If tampering value exceeds the 'threshold' for more than 'duration' second(s), then tamper

				detection is triggered.
--	--	--	--	-------------------------

## 7.15 DDNS

Group: **ddns**

NAME	VALUE	DEFAULT	SECURITY (get/set)	DESCRIPTION
enable	<boolean>	0	6/6	Enable or disable the dynamic DNS.
provider	Safe100, DyndnsDynamic, DyndnsCustom, TZO, DHS, DynInterfree, CustomSafe100	DyndnsD ynamic	6/6	Safe100 => safe100.net DyndnsDynamic => dyndns.org (dynamic) DyndnsCustom => dyndns.org (custom) TZO => tzo.com DHS => dhs.org DynInterfree => dyn-interfree.it CustomSafe100 => Custom server using safe100 method
<provider>_hostna me	string[128]	<blank>	6/6	Your DDNS hostname.
<provider>_userna meemail	string[64]	<blank>	6/6	Your user name or email to login to the DDNS service provider
<provider>_passwo rdkey	string[64]	<blank>	6/6	Your password or key to login to the DDNS service provider.
<provider>_servern ame	string[128]	<blank>	6/6	The server name for safe100. (This field only exists if the provider is customsaf100)

## 7.16 UPnP presentation

Group: **upnppresentation**

NAME	VALUE	DEFAULT	SECURITY (get/set)	DESCRIPTION
enable	<boolean>	1	6/6	Enable or disable the UPnP presentation service.

## 7.17 UPnP port forwarding

Group: **upnpportforwarding**

NAME	VALUE	DEFAULT	SECURITY (get/set)	DESCRIPTION
enable	<boolean>	0	6/6	Enable or disable the UPnP port forwarding service.
upnpnatstatus	0~3	0	6/7	The status of UPnP port forwarding, used internally. 0 = OK, 1 = FAIL, 2 = no IGD router, 3 = no need for port forwarding

## 7.18 System log

Group: **syslog**

NAME	VALUE	DEFAULT	SECURITY (get/set)	DESCRIPTION
enableremotelog	<boolean>	0	6/6	Enable remote log.
serverip	<IP address>	<blank>	6/6	Log server IP address.
serverport	514, 1025~65535	514	6/6	Server port used for log.
level	0~7	6	6/6	Levels used to distinguish the importance of the information: 0: LOG_EMERG 1: LOG_ALERT 2: LOG_CRIT 3: LOG_ERR 4: LOG_WARNING 5: LOG_NOTICE 6: LOG_INFO 7: LOG_DEBUG

## 7.19 SNMP

Group: **snmp** (capability.snmp) (product dependent)

NAME	VALUE	DEFAULT	SECURITY (get/set)	DESCRIPTION
v2	0~1	0	6/6	SNMP v2 enabled. 0 for disable, 1 for enable
v3	0~1	0	6/6	SNMP v3 enabled. 0 for disable, 1 for enable
secnamerw	string[31]	Private	6/6	Read/write security name
secnamero	string[31]	Public	6/6	Read only security name
authpwrw	string[8~128]	<blank>	6/6	Read/write authentication password
authpwro	string[8~128]	<blank>	6/6	Read only authentication password
authyperw	MD5,SHA	MD5	6/6	Read/write authentication type
authypero	MD5,SHA	MD5	6/6	Read only authentication type
encryptpwrw	string[8~128]	<blank>	6/6	Read/write passwrd
encryptpwro	string[8~128]	<blank>	6/6	Read only password
encrypttyperw	DES	<blank>	6/6	Read/write encryption type
encrypttypero	DES	<blank>	6/6	Read only encryption type
rwcommunity	string[31]	Private	6/6	Read/write community
rocommunity	string[31]	Public	6/6	Ready only community

Group: **snmp** (capability.snmp) (product dependent, VS7101)

NAME	VALUE	DEFAULT	SECURITY (get/set)	DESCRIPTION
versions	1 ~ 3	2	6/6	SNMP version to use.
rocomm	string[14]	public	6/6	V1, V2c Read only community.
rwcomm	string[14]	private	6/6	V1, V2c Read write community.

adminauthtype	0 ~ 2	0	6/6	Authority type for root authentication.
admindpvcy	string[64]	<blank>	6/6	Root data encryption key.
enableadpvcy	<boolean>	0	6/6	Enable root data encryption key.
userauthtype	0 ~ 2	0	6/6	User authority authentication.
userdpvcy	string[64]	<blank>	6/6	User data encryption key.
enableudpvcy	<boolean>	0	6/6	Enable user data encryption key.
trapserver	<ip address>, <domain name> [128]	<blank>	6/6	Trap server
trapcomm	string[14]	public	6/6	Trap community
objectid	string[40]	enterprise.8691.8.1.1	6/6	Object ID

## 7.20 Layout configuration

Group: **layout** (Old version) ([Only for VS7100, EM7100](#))

NAME	VALUE	DEFAULT	SECURITY (get/set)	DESCRIPTION
layouttype	1, 2	2	1/4	Layout type of main page: 1: image mode 2: text mode
fontcolor	0 ~ 15	1	1/4	Font color of main page.
backgroundcolor	0 ~ 15	0	1/4	Background color of the main page.
logotype	1 ~ 3	1	1/4	Source type of logo: 1: default 2: blank 3: user defined
backgroundtype	1 ~ 3	1	1/4	Source type of background: 1: default 2: blank

				3: user defined
logolinktype	1 ~ 3	1	1/4	Type of logo link: 1: default 2: blank 3: user defined
logosource	string[128]	http://	1/4	URL logo
backgroundsource	string[128]	http://	1/4	URL background
logolink	string[128]	<a href="http://www.vivotek.com">http://www.vivotek.com</a>	1/4	URL link for the logo
videolinkname	string[40]	<blank>	1/4	Customized video name in text mode

Group: **layout** (New version)

NAME	VALUE	DEFAULT	SECURITY (get/set)	DESCRIPTION
logo_default	<boolean>	1	1/6	0 => Custom logo 1 => Default logo
logo_link	string[40]	<a href="http://www.vivotek.com">http://www.vivotek.com</a>	1/6	Hyperlink of the logo
logo_powerbyvvtk_hidden	<boolean>	0	1/6	0 => display the power by vivotek logo 1 => hide the power by vivotek logo
theme_option	1~4	1	1/6	1~3: One of the default themes. 4: Custom definition.
theme_color_font	string[7]	#000000	1/6	Font color
theme_color_configfont	string[7]	#ffffff	1/6	Font color of configuration area.
theme_color_titlefont	string[7]	#098bd6	1/6	Font color of video title.
theme_color_controlbackground	string[7]	#c4eaff	1/6	Background color of control area.
theme_color_configbackground	string[7]	#0186d1	1/6	Background color of configuration area.
theme_color_videobackground	string[7]	#c4eaff	1/6	Background color of video area.

theme_color_case	string[7]	#0186d1	1/6	Frame color
custombutton_manualtrigger_s how	<boolean>	1	1/6	Show or hide manual trigger (VI) button in homepage 0 -> Hidden 1 -> Visible

## 7.21 Privacy mask

Group: **privacymask\_c<0~(n-1)>** for n channel product

NAME	VALUE	DEFAULT	SECURITY (get/set)	DESCRIPTION
enable	<boolean>	0	4/4	Enable privacy mask.
win_i<0~4>_enable	<boolean>	0	4/4	Enable privacy mask window.
win_i<0~4>_name	string[14]	<blank>	4/4	Name of the privacy mask window.
win_i<0~4>_left	0 ~ 320/352	0	4/4	Left coordinate of window position.
win_i<0~4>_top	0 ~ 240/288	0	4/4	Top coordinate of window position.
win_i<0~4>_width	0 ~ 320/352	0	4/4	Width of privacy mask window.
win_i<0~4>_height	0 ~ 240/288	0	4/4	Height of privacy mask window.

## 7.22 Capability

Group: **capability**

NAME	VALUE	DEFAULT	SECURITY (get/set)	DESCRIPTION
api_httpversion	0200a	0100a	0/7	The HTTP API version.
bootuptime	<positive integer>	60	0/7	Server bootup time.
nir	0, <positive integer>	0	0/7	Number of IR interfaces.
npir	0,	0	0/7	Number of PIRs.

	<positive integer>			
ndi	0, <positive integer>	1	0/7	Number of digital inputs.
ndo	0, <positive integer>	0	0/7	Number of digital outputs.
naudioin	0, <positive integer>	0	0/7	Number of audio inputs.
naudioout	0, <positive integer>	0	0/7	Number of audio outputs.
nvideoin	<positive integer>	1	0/7	Number of video inputs.
nmediastream	<positive integer>	4	0/7	Number of media stream per channels.
nvideosetting	<positive integer>	2	0/7	Number of video settings per channel.
naudiosetting	<positive integer>	0	0/7	Number of audio settings per channel.
nuart	0, <positive integer>	0	0/7	Number of UART interfaces.
nmotionprofile	<positive integer>	1	0/7	Number of motion profiles.
ptzenabled	<positive integer>	0	0/7	An 32-bit integer, each bit can be set separately as follows: Bit 0 => Support camera control function; 0(not support), 1(support) Bit 1 => Built-in or external camera;

				<p>0(external), 1(built-in)</p> <p>Bit 2 =&gt; Support pan operation, 0(not support), 1(support)</p> <p>Bit 3 =&gt; Support tilt operation; 0(not support), 1(support)</p> <p>Bit 4 =&gt; Support zoom operation; 0(not support), 1(support)</p> <p>Bit 5 =&gt; Support focus operation; 0(not support), 1(support)</p> <p>Bit 6 =&gt; Support iris operation; 0(not support), 1(support)</p> <p>Bit 7 =&gt; External or built-in PT; 0(built-in), 1(external)</p> <p>Bit 8 =&gt; Invalidate bit 1 ~ 7; 0(bit 1 ~ 7 are valid), 1(bit 1 ~ 7 are invalid)</p> <p>Bit 9 =&gt; Reserved bit; Invalidate lens_pan, lens_tilt, lens_zoon, lens_focus, len_iris. 0(fields are valid), 1(fields are invalid)</p>
eptz	<positive integer>	7	0/7	<p>A 32-bit integer, each bit can be set separately as follows:</p> <p>Bit 0 =&gt; stream 1 supports ePTZ or</p>

				not. Bit 1 => stream 2 supports ePTZ or not. The rest may be deduced by analogy
npreset	<positive integer>	20	0/7	Number of preset locations.
protocol_https	< boolean >	1	0/7	Indicate whether to support HTTP over SSL.
protocol_rtsp	< boolean >	1	0/7	Indicate whether to support RTSP.
protocol_sip	<boolean>	0	0/7	Indicate whether to support SIP.
protocol_maxconnection	<positive integer>	10	0/7	The maximum allowed simultaneous connections.
protocol_maxgenconnection	<positive integer>	10	0/7	The maximum general streaming connections .
protocol_maxmegaconnection	<positive integer>	0	0/7	The maximum megapixel streaming connections.
protocol_rtp_multicast_ scalable	<boolean>	1	0/7	Indicate whether to support scalable multicast.
protocol_rtp_multicast_ backchannel	<boolean>	0	0/7	Indicate whether to support backchannel multicast.
protocol_rtp_tcp	<boolean>	1	0/7	Indicate whether to support RTP over TCP.
protocol_rtp_http	<boolean>	1	0/7	Indicate whether to support RTP over HTTP.
protocol_spush_mjpeg	<boolean>	1	0/7	Indicate whether to support server push

				MJPEG.
protocol_snmp	<boolean>	1	0/7	Indicate whether to support SNMP.
protocol_ipv6	<boolean>	1	0/7	Indicate whether to support IPv6.
videoin_type	0, 1, 2	2	0/7	0 => Interlaced CCD 1 => Progressive CCD 2 => CMOS
videoin_resolution	<a list of available resolution separated by commas>	176x144,320x240,640x400,1280x800	0/7	Available resolutions list.
videoin_maxframerate	<a list of available maximum frame rate separated by commas>	30,30,30,30	0/7	Available maximum frame list.
videoin_codec	<a list of available codec types separated by commas>	mpeg4,mjpeg,h264	0/7	Available codec list.
transmission_mode	Tx, Rx, Both	Tx	0/7	Indicate transmission mode of the machine: TX = server, Rx = receiver box, Both = DVR.
network_wire	<boolean>	1	0/7	Indicate whether to support Ethernet.
network_wireless	<boolean>	0	0/7	Indicate whether to support wireless.
wireless_s802dot11b	<boolean>	0	0/7	Indicate whether to

				support wireless 802.11b+.
wireless_s802dot11g	<boolean>	0	0/7	Indicate whether to support wireless 802.11g.
wireless_beginchannel	1 ~ 14	1	0/7	Indicate the begin channel of wireless network
wireless_endchannel	1 ~ 14	11	0/7	Indicate the end channel of wireless network
wireless_encrypt_wep	<boolean>	0	0/7	Indicate whether to support wireless WEP.
wireless_encrypt_wpa	<boolean>	0	0/7	Indicate whether to support wireless WPA.
wireless_encrypt_wpa2	<boolean>	0	0/7	Indicate whether to support wireless WPA2.
derivative_brand	<boolean>	0	0/7	Indicate whether to support the upgrade function for the derivative brand. For example, if the value is true, the VVTK product can be upgraded to VVXX. (TCVV<->TCXX is excepted)
joystick	<boolean>	0	0/7	Indicate whether to support joystick control.
storage_dbenabled	<boolean>	1	0/7	Media files are indexed in database.
nanystream	<positive integer>	1	0/7	number of any media stream per channel
iva	<boolean>	0	0/7	Indicate whether to

				support Intelligent Video analysis
whitelight	<boolean>	0	0/7	Indicate whether to support white light led.
tampering	<boolean>	1	0/7	Indicate whether to support tampering detection.
temperature	<boolean>	0	0/7	Indicate whether to support temperature detection.
version_onvifdaemon	<string>	1.0.0.1	0/7	Indicate ONVIF daemon version

## 7.23 Customized event script

Group: **event\_customtaskfile\_i**<0~2>

PARAMETER	VALUE	Default	SECURITY (get/set)	DESCRIPTION
name	string[41]	NULL	6/7	Custom script identification of this entry.
date	string[17]	NULL	6/7	Date of custom script.
time	string[17]	NULL	6/7	Time of custom script.

Group: **custom\_i**<0~2>

PARAMETER	VALUE	DEFAULT	SECURITY (get/set)	DESCRIPTION
name	string[40]	NULL	6/6	Identification of customized event script file.

## 7.24 Event setting

Group: **event\_i**<0~2>

PARAMETER	VALUE	Default	SECURITY (get/set)	DESCRIPTION
name	string[40]	NULL	6/6	Identification of this entry.
enable	0, 1	0	6/6	Enable or disable this event.
priority	0, 1, 2	1	6/6	Indicate the priority of this event: "0" = low priority "1" = normal priority "2" = high priority
delay	1~999	10	6/6	Delay in seconds before detecting the next event.
trigger	boot, di, motion, seq, recnotify, tampering,	boot	6/6	Indicate the trigger condition: "boot" = System boot "di" = Digital input "motion" = Video motion detection "seq" = Periodic condition "recnotify" = Recording notification. "tampering" = Tamper detection.
triggerstatus	String[40]	triggerstatus	6/6	The status for event trigger
di	<integer>	1	6/6	Indicate the source id of di trigger. This field is required when trigger condition is "di". One bit represents one digital input. The LSB indicates DI 0.
mdwin	<integer>	0	6/6	Indicate the source window id of motion detection. This field is required when trigger condition is "md". One bit represents one window. The LSB indicates the 1 <sup>st</sup> window. For example, to detect the 1 <sup>st</sup> and 3 <sup>rd</sup> windows, set mdwin as 5.

mdwin0	<integer>	0	6/6	Similar to mdwin. The parameter takes effect when profile 1 of motion detection is enabled.
inter	1~999	1	6/6	Interval of snapshots in minutes. This field is used when trigger condition is "seq".
weekday	0~127	127	6/6	Indicate which weekday is scheduled. One bit represents one weekday. bit0 (LSB) = Saturday bit1 = Friday bit2 = Thursday bit3 = Wednesday bit4 = Tuesday bit5 = Monday bit6 = Sunday For example, to detect events on Friday and Sunday, set weekday as 66.
begintime	hh:mm	00:00	6/6	Begin time of the weekly schedule.
endtime	hh:mm	24:00	6/6	End time of the weekly schedule. (00:00 ~ 24:00 sets schedule as always on)
action_cf_enable	0, 1	0	6/6	Enable media write on CF or other local storage media
action_cf_folder	string[128]	NULL	6/6	Path to store media.
action_cf_media	NULL, 0~4	NULL	6/6	Index of the attached media.
action_cf_datefolder	<boolean>	0	6/6	Enable this to create folders by date, time, and hour automatically.
action_server_i<0~4>_enable	0, 1	0	6/6	Enable or disable this server action.
action_server_i<0~4>_media	NULL, 0~4	NULL	6/6	Index of the attached media.
action_server_i<0~4>_datefolder	<boolean>	0	6/6	Enable this to create folders by date, time, and hour automatically.

# Technical Specifications

## Technical Specifications

System Information		Alarm and Event	
CPU	Multimedia SoC (System-on-Chip)	Alarm Triggers	Video motion detection, manual trigger, digital input, periodical trigger, system boot, recording notify, camera tampering detection
Flash	128 MB	Alarm Events	Event notification using digital output, HTTP, SMTP, FTP and NAS server File upload via HTTP, SMTP, FTP and NAS server
RAM	256 MB		
Camera Features		General	
Image Sensor	1/4" CMOS sensor	Connectors	RJ-45 cable connector for Network/PoE connection Digital input*1 DC 12V power input
Maximum Resolution	1280x800	LED Indicator	System power and status indicator
Lens Type	Vari-focal	Power Input	DC 12V IEEE 802.3af PoE Class 1
Focal Length	f = 3 ~ 12 mm	Power Consumption	Max. 3.84 W
Aperture	F1.4 (wide), F3.2 (tele)	Dimensions	Ø: 109.5 mm x 90.5 mm
Field of View	48.06° ~ 17.06° (horizontal) 28.97° ~ 10.76° (vertical) 55.62° ~ 19.76° (diagonal)	Weight	Net: 500 g
Shutter Time	1/5 sec. to 1/32,000 sec.	Safety Certifications	CE, LVD, FCC Class B, VCCI, C-Tick
Minimum Illumination	0.5 Lux @ F1.4, 50 IRE	Operating Temperature	-10°C ~ 50°C (14°F ~ 122°F)
Pan/tilt/zoom	ePTZ:	Warranty	24 months
Functionalities	16x digital zoom (4x on IE plug-in, 4x built-in)		
On-board Storage	MicroSD/SDHC card slot		
Video		System Requirements	
Compression	H.264, MJPEG & MPEG-4	Operating System	Microsoft Windows 7/Vista/XP/2000
Maximum Frame Rate	H.264: 30 fps at 1280x800 MPEG-4: 30 fps at 1280x800 MJPEG: 30 fps at 1280x800	Web Browser	Mozilla Firefox 7~10 (streaming only) Internet Explorer 7.x or 8.x
Maximum Streams	4 simultaneous streams	Other Players	VLC: 1.1.11 or above Quicktime: 7 or above
S/N Ratio	Above 53 dB		
Dynamic Range	40 dB		
Video Streaming	Adjustable resolution, quality and bitrate		
Image Settings	Adjustable image size, quality and bit rate Time stamp, text overlay, flip & mirror Configurable brightness, contrast, saturation, sharpness, white balance, exposure control, gain, backlight compensation, privacy masks Scheduled profile settings		
Network		Included Accessories	
Users	Live viewing for up to 10 clients	CD	User's manual, quick installation guide, Installation Wizard 2, ST7501 32-channel recording software
Protocols	IPv4, IPv6, TCP/IP, HTTP, HTTPS, UPnP, RTSP/RTP/RTCP, IGMP, SMTP, FTP, DHCP, NTP, DNS, DDNS, PPPoE, CoS, QoS, SNMP, 802.1X	Others	Quick installation guide, warranty card, alignment sticker, screws, software CD
Interface	10Base-T/100 BaseTX Ethernet (RJ-45)		
ONVIF	Ver. 1.02		
Intelligent Video		Dimensions	
Video Motion Detection	Triple-window video motion detection		

## Compatible Accessories

### Mounting Kits

**AM-214**  
L shape bracket

**AM-518**  
Dome adapter

**AM-517**  
Adaptor ring

**AM-212**  
Wall mount bracket

### Wireless

**N600AG**  
Wireless access point

### PoE Kits

**MS-POE-IJAF**  
PoE injector, 802.3af compliant

THIS PRODUCT IS LICENSED UNDER THE AMR-NB STANDARD PATENT LICENSE AGREEMENT. WITH RESPECT TO THE USE OF THIS PRODUCT, THE FOLLOWING LICENSORS' PATENTS MAY APPLY:

TELEFONAKIEBOLAGET ERICSSON AB: US PAT. 6192335; 6275798; 6029125; 6424938; 6058359. NOKIA CORPORATION: US PAT. 5946651; 6199035. VOICEAGE CORPORATION: AT PAT. 0516621; BE PAT. 0516621; CA PAT. 2010830; CH PAT. 0516621; DE PAT. 0516621; DK PAT. 0516621; ES PAT. 0516621; FR PAT. 0516621; GB PAT. 0516621; GR PAT. 0516621; IT PAT. 0516621; LI PAT. 0516621; LU PAT. 0516621; NL PAT. 0516621; SE PAT. 0516621; US PAT. 5444816; AT PAT. 819303/AT E 198805T1; AU PAT. 697256; BE PAT. 819303; BR PAT. 9604838-7; CA PAT. 2216315; CH PAT. 819303; CN PAT. ZL96193827.7; DE PAT. 819303/DE69611607T2; DK PAT. 819303; ES PAT. 819303; EP PAT. 819303; FR PAT. 819303; GB PAT. 819303; IT PAT. 819303; JP PAT. APP. 8-529817; NL PAT. 819303; SE PAT. 819303; US PAT. 5664053. THE LIST MAY BE UPDATED FROM TIME TO TIME BY LICENSORS AND A CURRENT VERSION OF WHICH IS AVAILABLE ON LICENSOR'S WEBSITE AT [HTTP://WWW.VOICEAGE.COM](http://www.voiceage.com).

## Electromagnetic Compatibility (EMC)

### FCC Statement

This device complies with FCC Rules Part 15. Operation is subject to the following two conditions.

- This device may not cause harmful interference, and
- This device must accept any interference received, including interference that may cause undesired operation.

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a partial installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

Shielded interface cables must be used in order to comply with emission limits.

### CE Mark Warning

This is a Class B product. In a domestic environment, this product may cause radio interference, in which case the user may be required to take adequate measures.

### VCCI Warning

この装置は、情報処理装置等電波障害自主規制協議会（V C C I）の基準に基づくクラスB情報技術装置です。この装置は、家庭環境で使用することを目的としていますが、この装置がラジオやテレビジョン受信機に近接して使用されると、受信障害を引き起こすことがあります。

取扱説明書に従って正しい取り扱いをして下さい

### Liability
